Benefits Topic Framework — Developer Handoff

Sep 26, 2026 · Prepared for Ty Rogers & Dan Whitfield

1. Summary

Build one reusable Topic component with two display modes (Featured Card and Quick Answers). Topics live in a shared library and are *placed* into locations: the four benefit categories, a new Employee Resources (HR) hub, and Life Event pages. The advisor controls each placement: Featured, Quick Answers, or Hidden, plus drag order. Cross-category actions (beneficiaries, change of address) aggregate provider links from every active category into one card.

This handoff covers:

1. Current state (Air Fayre demo) and gaps
2. Core concept and data model
3. Participant page, Quick Answers, and Action Hub wireframes
4. Life Events and Employee Resources (HR) hub
5. Admin builder wireframe
6. Default topic library
7. Numbered tickets with priority and acceptance criteria

Scope note: This does not change the 1–4 benefit category rule or the canonical order (Retirement, Group Health, Group Life, Other / Custom). Employee Resources and Life Events are separate hub locations, not benefit categories.

Final decisions (read this first)

This list overrides any earlier option or alternative in this document.

1. **Path B · Evolve** the existing templates for the pilot. Path A stays as future reference only.
2. **Hub home:** OE countdown bar → sponsor welcome (photo hero + company message) → Benefits at a Glance (one card per category with an image slot, linking to its benefit page, no login links; the 4th card is the renamed Custom category, e.g. HR Resources)

→ Life Events strip → footer.

3. **Benefit page order:** advisor welcome ("Welcome to Waypoint," headshot, personal message, Schedule with [name]) → **Video section** (only when turned on and a video is added) → **How Can We Help You Today? (Featured)** → **Get Quick Answers (FAQs)** → Need assistance band → footer.
4. **Video section, Phase 1 (this build):** a simple, hideable section with **one video the advisor uploads or links** (YouTube, Vimeo, Loom, or MP4 / MOV) to introduce themselves, the benefit, or their service. It has an editable headline, subhead, short description, thumbnail, and Schedule button. Position: after the welcome (default), after How Can We Help + Quick Answers, or hidden; it auto-hides when no video is added. **Phase 2** (after the Video Generator ships) adds the Spotlight + Carousel default, Featured Duo, and Carousel-only layouts.
5. **How Can We Help You Today? (Featured):** a modular card grid. **Row 1 = 2/4 + 1/4 + 1/4. Row 2 = 4 × 1/4.** 2 rows by default, each row's layout can be changed (4 × 1/4, 2/4 + 1/4 + 1/4, 1/4 + 1/4 + 2/4, 2/4 + 2/4), and a **3rd row can be added (max 3)**. Any card (Account Access, a topic, a contact) can sit in the wide slot. Every card expands inline beneath its row (Account Access links out to the login).
6. **Get Quick Answers (FAQs): 20+ questions per category** shipped prefilled, grouped, searchable, in a two-column accordion. Advisors can **add custom questions** and **graduate any FAQ to Featured** up to the limit. A question lives in Featured or in Quick Answers, never both.
7. **No standalone pages** for Rollovers, Financial Planning, or any topic. Rich topics (options compare, process steps, checklists) render inline.
8. **Card style options** in Branding: Corners (Square default · Soft · Round), Surface (Outline default · Shadow · Tinted), Buttons (Match corners default · Pill), alongside the existing typography options.
9. **My Benefits Team:** one Contact module (featured HR contact + contacts grouped by category, with a group-level support line).
10. **Later, not in this build:** a search bar that behaves like a chat (Hub Navigator, Section 12), the video carousel and Duo layouts (with the Video Generator), the Path A slide-over and bottom-nav patterns, and Life Events detail pages beyond the checklist.

Two paths: Evolve (recommended for pilot) or Redesign

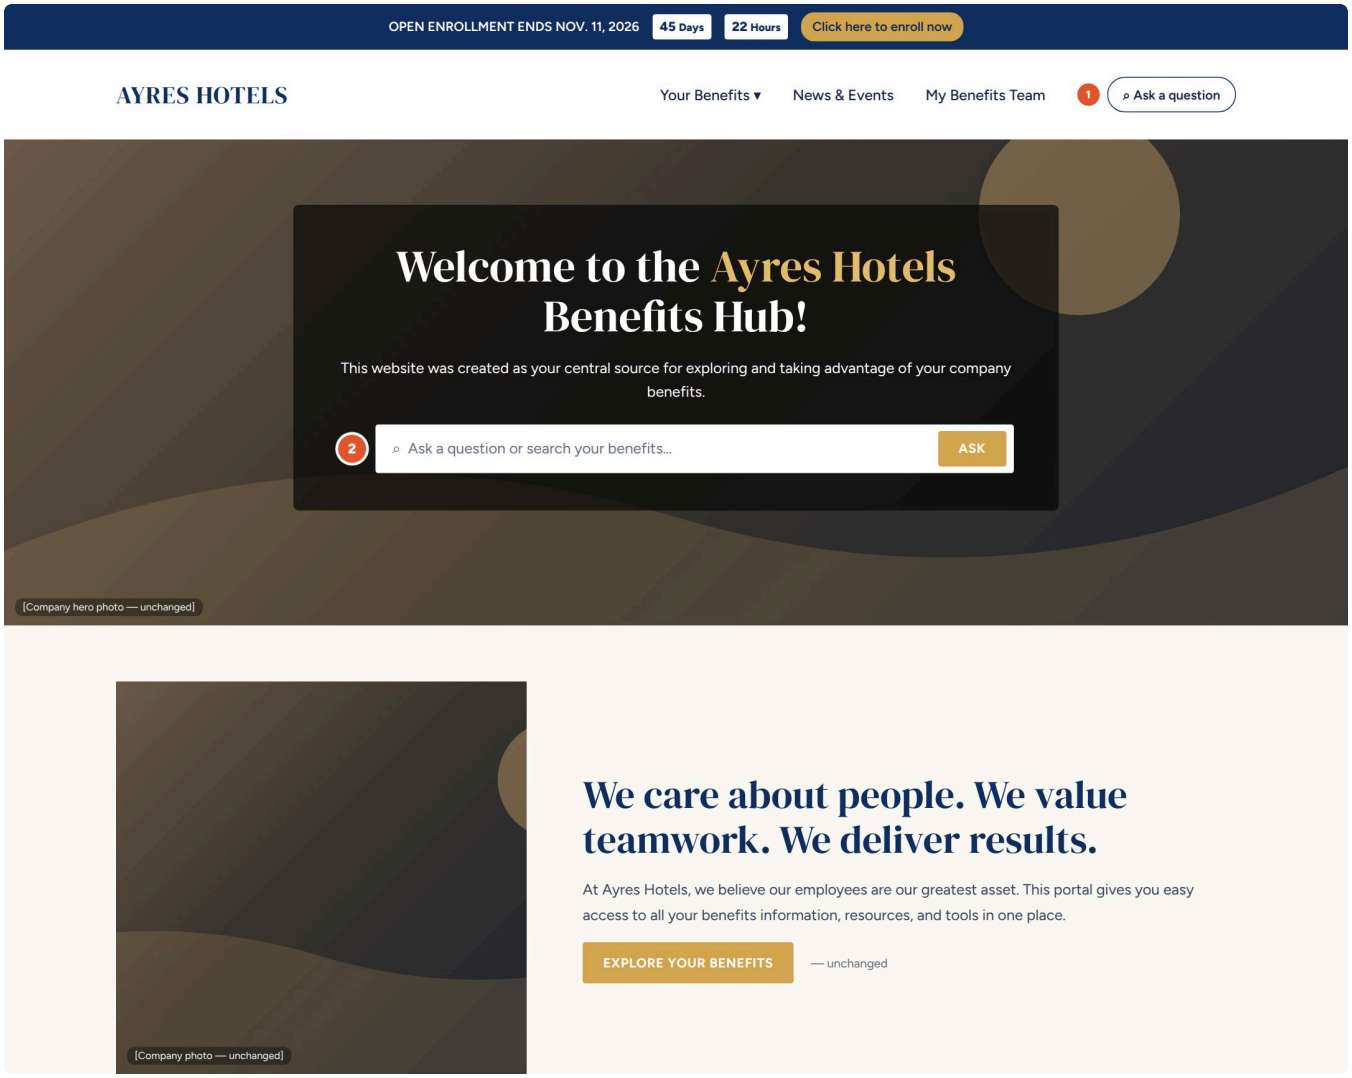

Everything underneath (topic library, placements, templates, Action Hubs, Life Events, default content, conversion CTAs) is the same for both paths. Only the presentation layer differs.

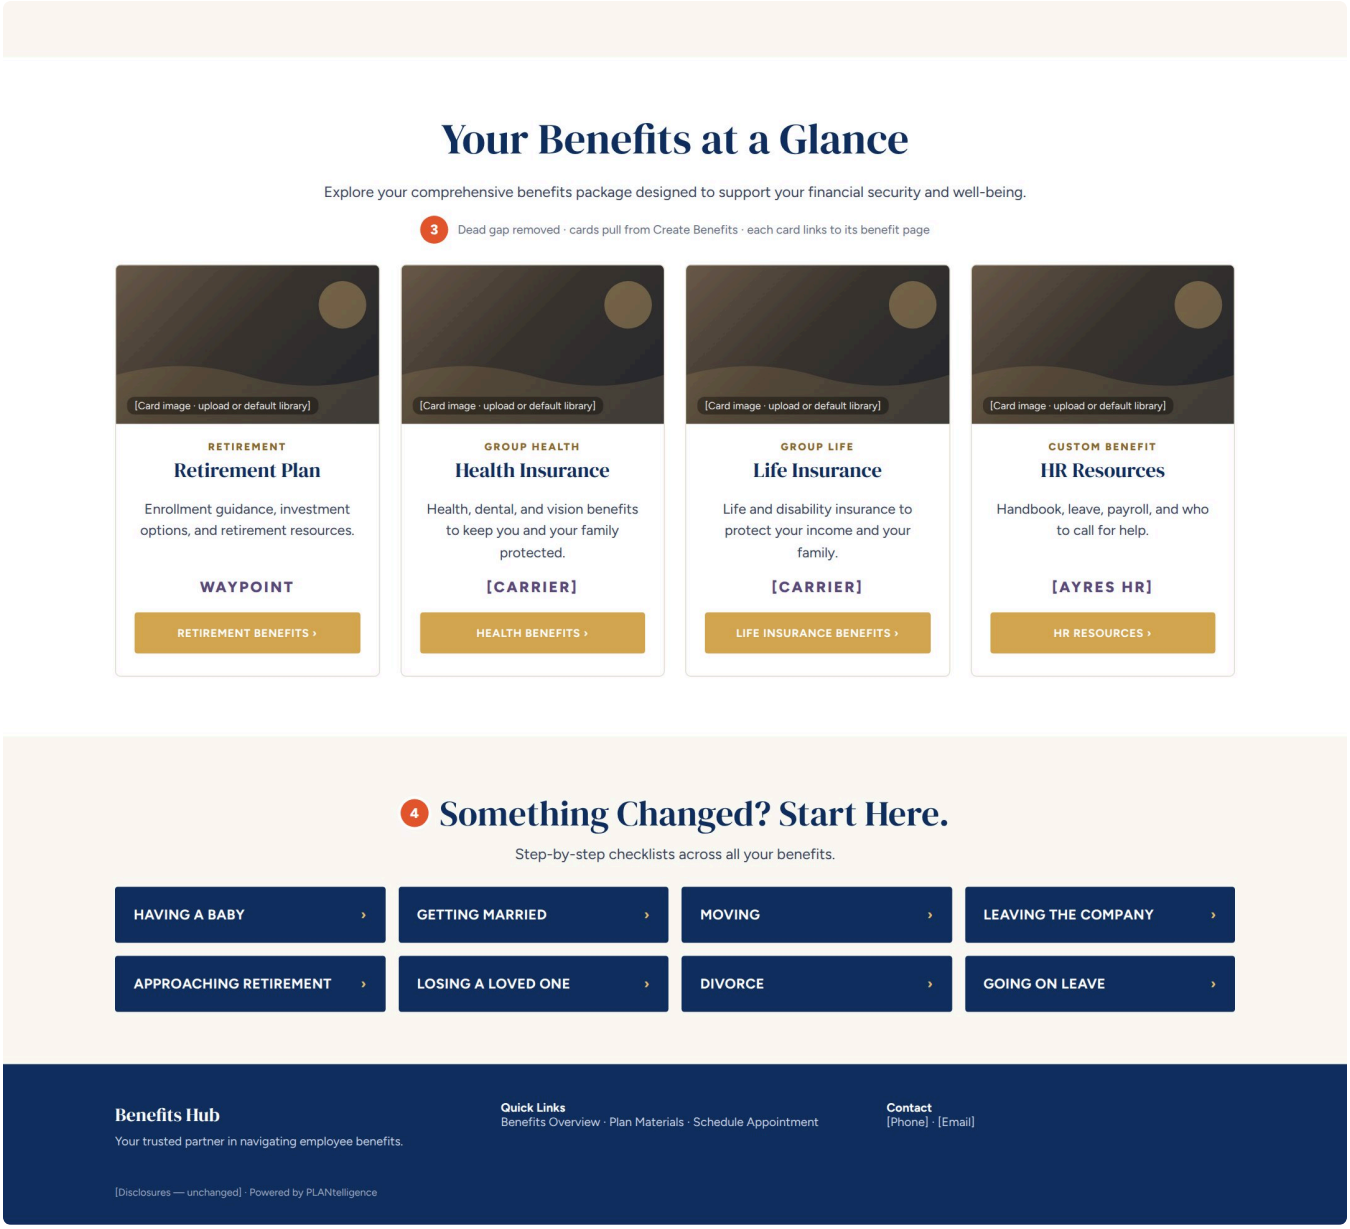

Path B · Evolve keeps the landing and page templates already built into the tool (Piazza / Air Fayre / Ayres style) and changes only what's needed. **Path A · Redesign** is the fuller visual refresh shown in the next section. Path B is recommended for the pilot, with Path A elements (mobile bottom nav, Navigator) adopted later piece by piece.

Path B · Evolve the current templates

Numbered markers on each mockup match the change lists. Anything without a marker is **unchanged** from today.

Landing page

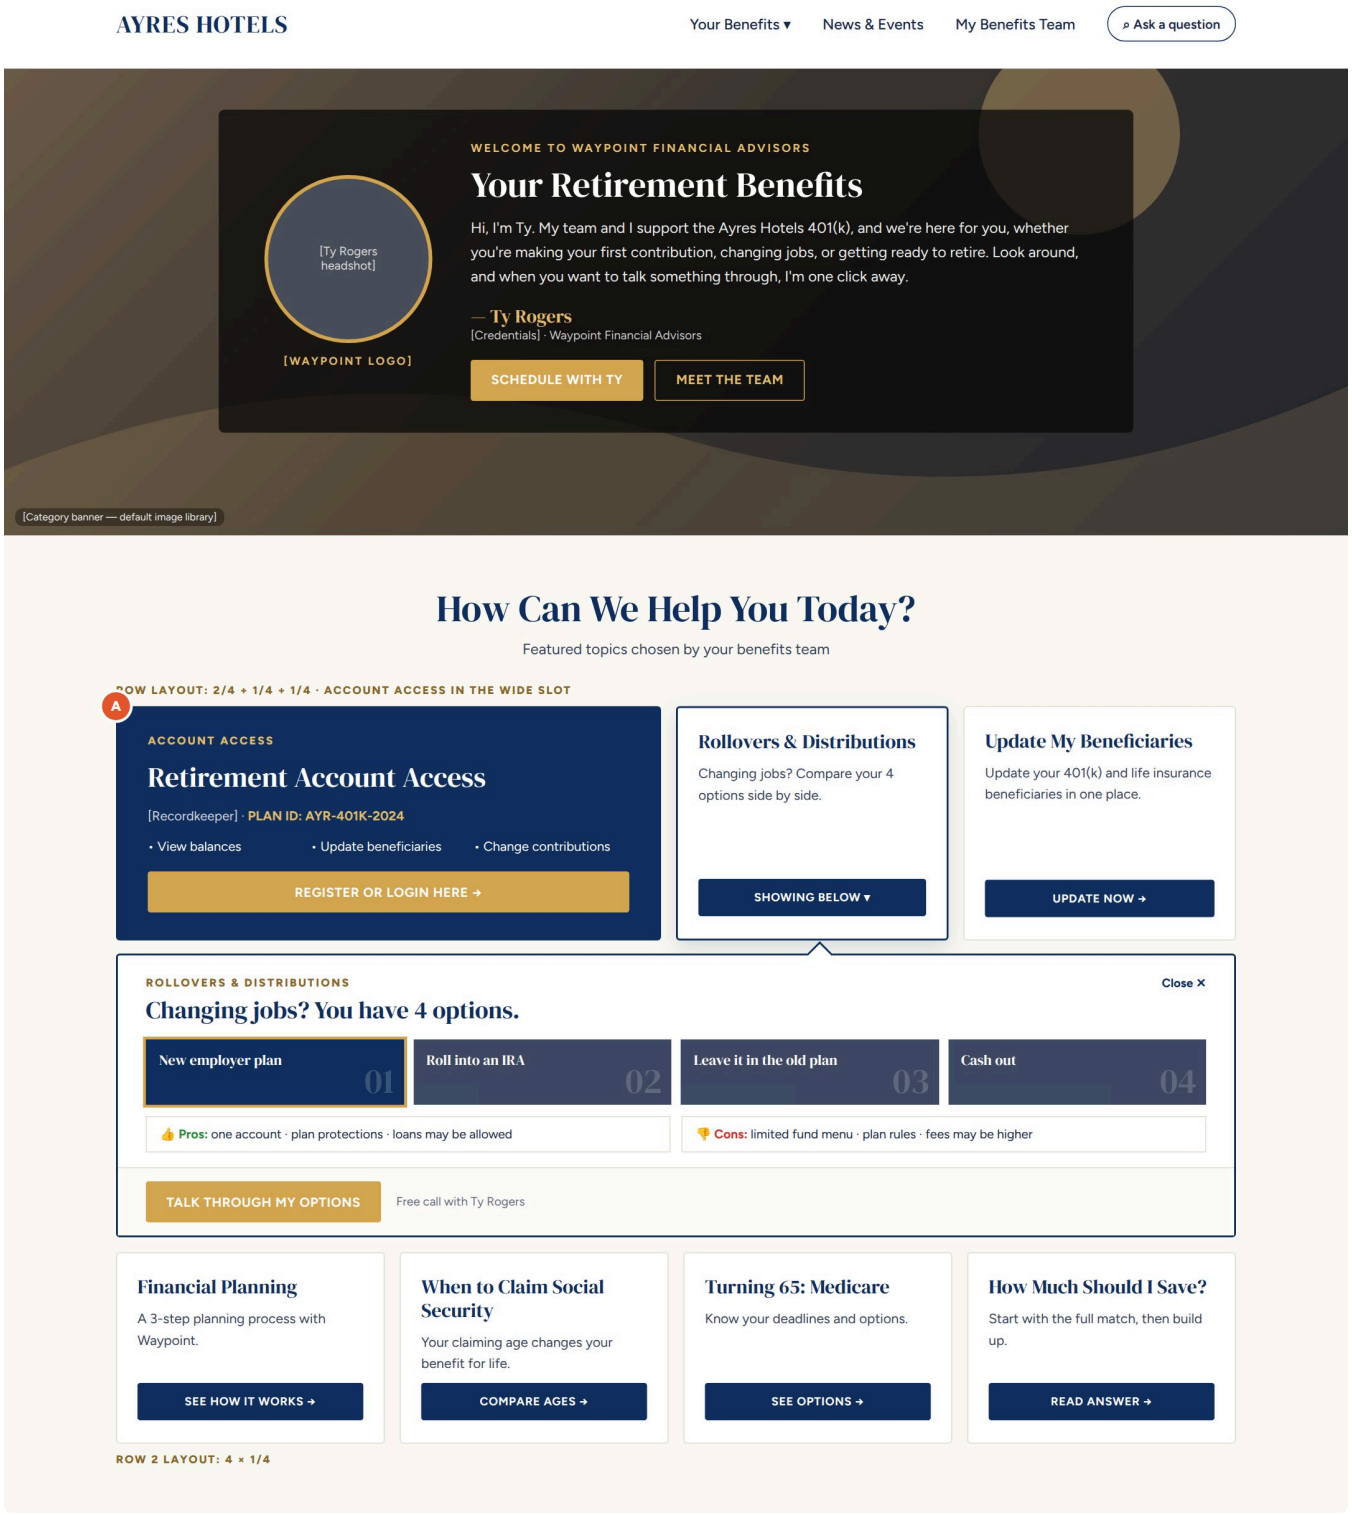

Keep: OE countdown bar, header and nav, photo hero with the dark welcome box, the “We care about people” company block, Benefits at a Glance cards with provider logos, footer and disclosures.

1. **Ask pill in the nav.** Phase 2, when the Navigator ships.
2. **Ask / search bar inside the welcome box.** Search first (TF-7).
3. **Glance cards are the doorway to each benefit page.** Each card’s gold button (“Retirement Benefits ›”, “Health Benefits ›” …) links to that category’s benefit page, and the whole card is clickable. There’s no login link on Glance cards; account access lives on the benefit pages. Every card has an **image slot** at the top (upload or pick from the default image library, with a category default if left empty), a small category label, title, short copy, and the provider logo. Cards are data-driven from Create Benefits in

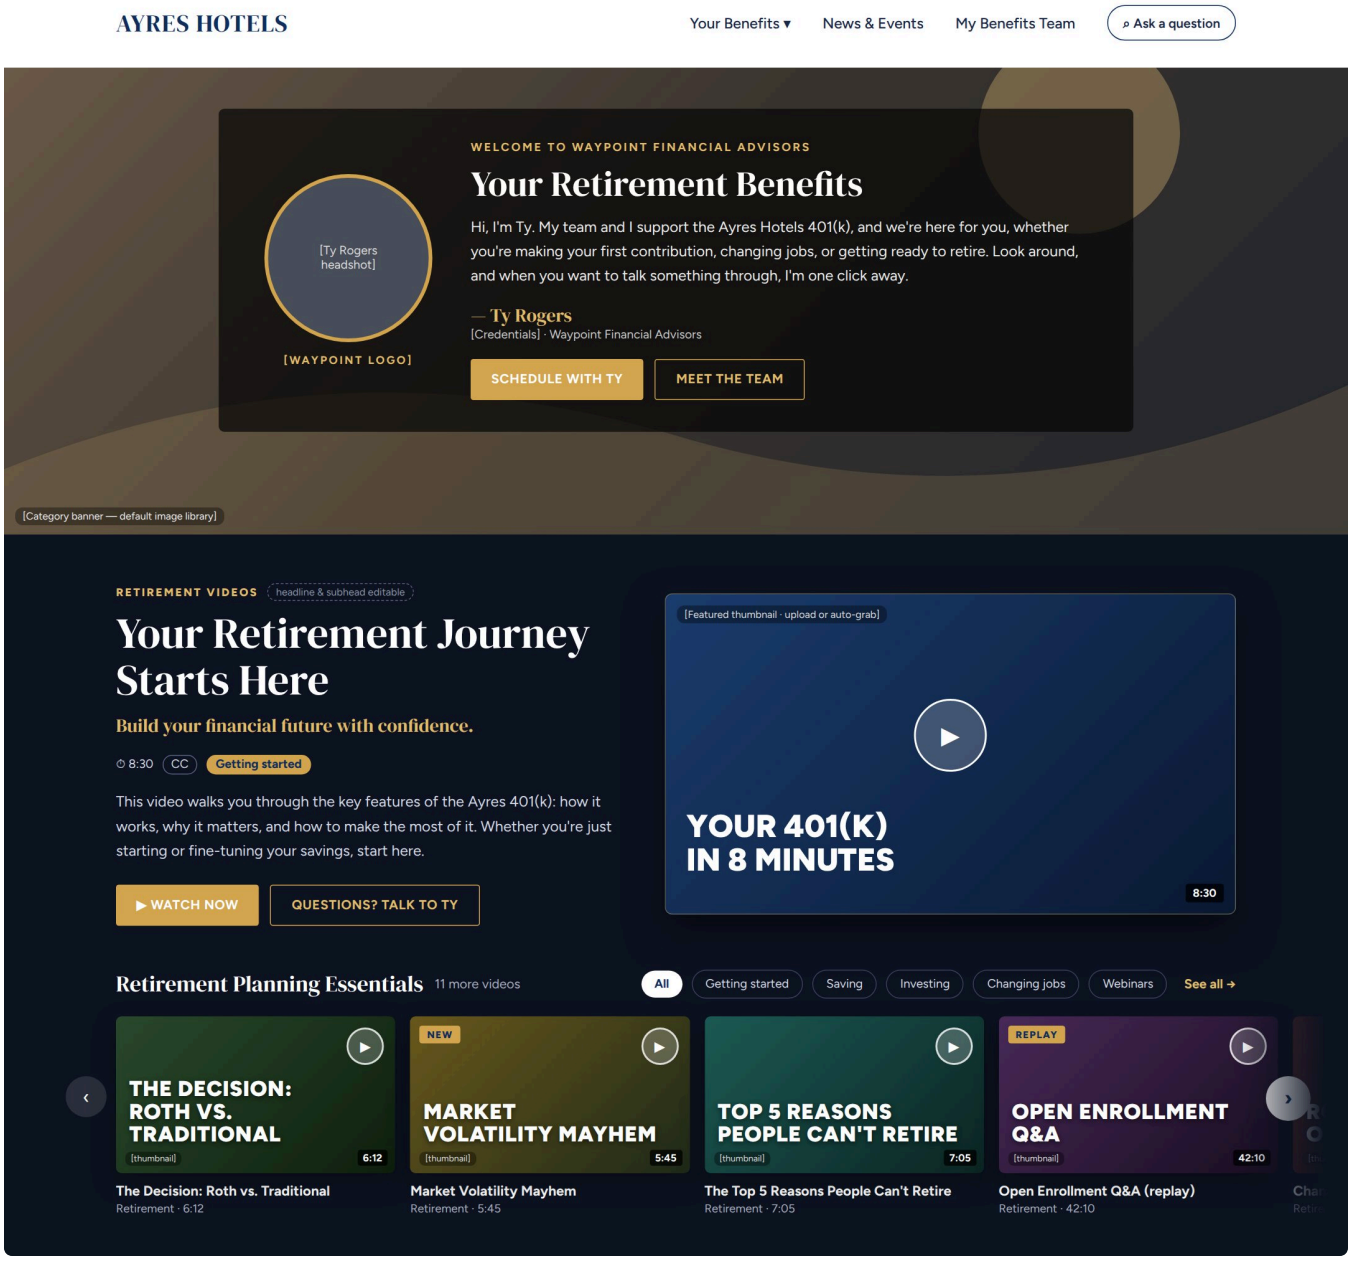

canonical order (Retirement, Group Health, Group Life, Other / Custom), one per visible category. The 4th card is the **Other / Custom** category under whatever name the advisor gives it (e.g. **HR Resources**, Wellness, Voluntary Benefits). This removes the dead gap and placeholder copy.

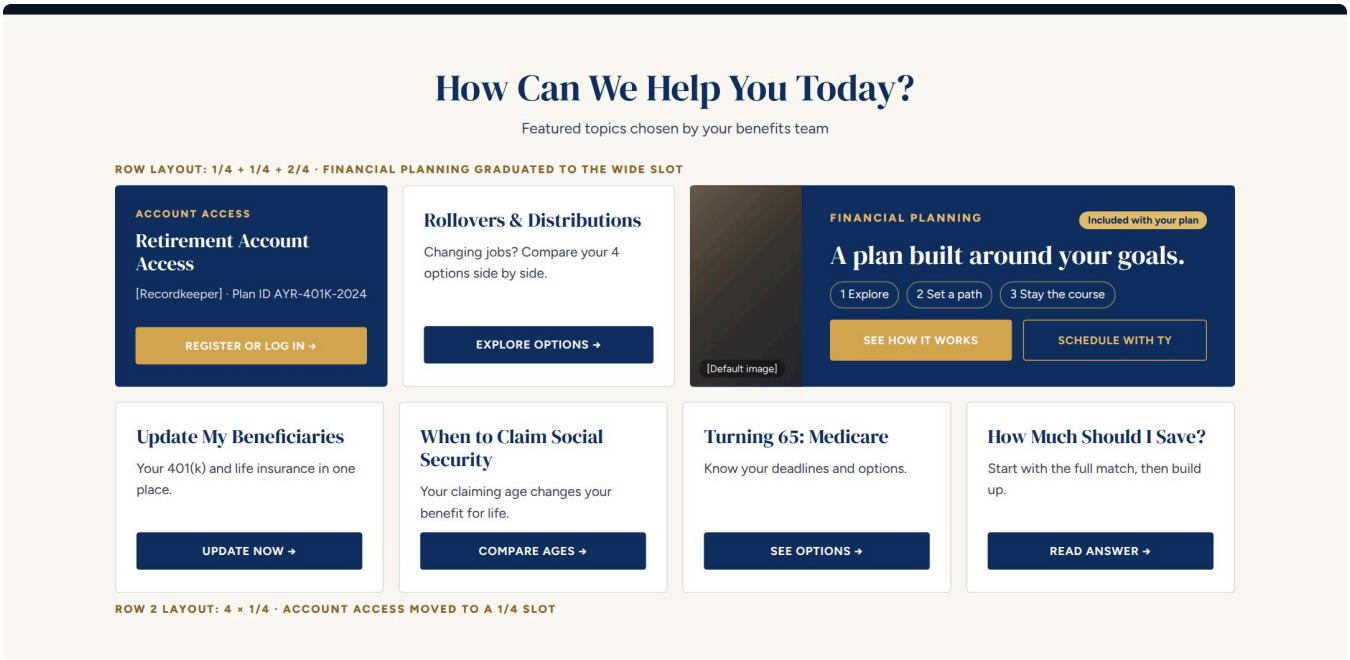

4. **New "Something Changed? Start Here." strip** of Life Events, in the existing navy button style.

Benefit category page (Retirement shown)

*Layout example 1: row 1 = **2/4 + 1/4 + 1/4** with Account Access in the wide slot. Rollovers is open in place beneath the row. Row 2 = **4 × 1/4**.*

*Layout example 2: same page and same cards, with **Financial Planning graduated to the wide slot** in a **1/4 + 1/4 + 2/4** row. Account Access drops to a 1/4 card, and Update My Beneficiaries moves to row 2. This example also shows the **Video section** in its default position (2nd, right after the welcome) and default layout (**Solo Feature**).*

Video section · Phase 1 (this build)

The Video Generator isn't finished, so in this build the Video section is a **simple, optional section for one custom video**. Everything after this subsection (layouts, carousel, Video Library) is **Phase 2**.

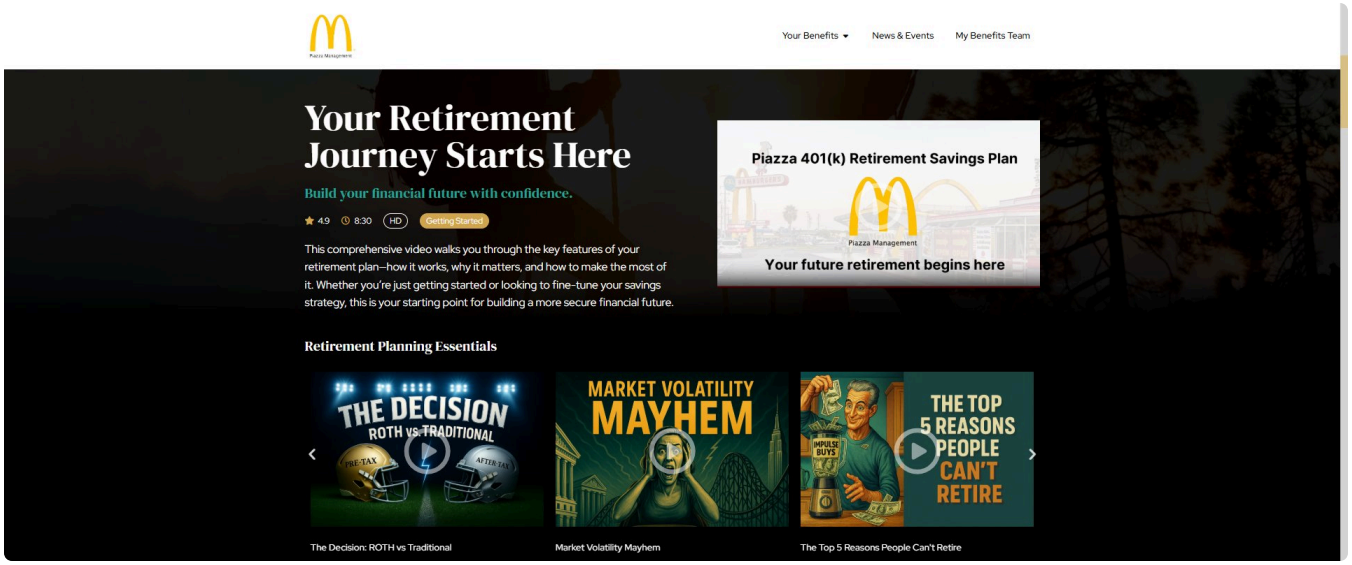

1. **Purpose:** one video per benefit page where the advisor introduces **themselves**, **the benefit**, or **their service**. Video type is a simple tag: Advisor intro · This benefit · Our services.
2. **Source: upload a file** (MP4 / MOV, size limit set by storage; stored in R2 like documents, plan-scoped) **or paste a URL** (YouTube, Vimeo, Loom; rendered with the provider's embed player). Validate the link and show a preview before saving.
3. **Fields:** headline and subhead (category defaults, e.g. “Your Retirement Journey Starts Here”), short description, thumbnail (auto-grabbed from the URL or first frame, or uploaded), optional captions file, and the Schedule button from Settings.
4. **Layout:** the Solo layout without a carousel. Text on the left, video on the right, dark band. On phones the video stacks under the headline.
5. **Show / hide:** a toggle per benefit page. **The section also auto-hides when no video has been added,** so an empty section never shows to participants.
6. **Position:** after the welcome (default), after How Can We Help + Quick Answers, or hidden.
7. **Reuse:** an advisor-intro video can be saved to the advisor's profile in Settings and reused on any plan with one click.

8. **Data:** `VideoSection {plan_id, location, enabled, source: upload | url, file_key | embed_url, video_type: advisor_intro | benefit | service, headline, subhead, description, thumbnail_key, captions_key, position: after_welcome | after_questions | hidden}`. In Phase 2 this grows into the full Video Library model below without a migration break.
9. **Ticket TF-14 · Video section Phase 1 · Must Have. A.** Admin form (toggle, upload / URL, type, headline, subhead, description, thumbnail, position) and the participant section. **B.** R2 upload + signed playback URLs, embed parsing for YouTube / Vimeo / Loom, thumbnail grab, auto-hide when empty. **Accept:** uploading an MP4 on Plan A's Retirement page shows it only on that page; pasting a YouTube link renders the embed; toggling off or removing the video hides the section.

Video section · Phase 2 (after the Video Generator): layouts, headline, and position

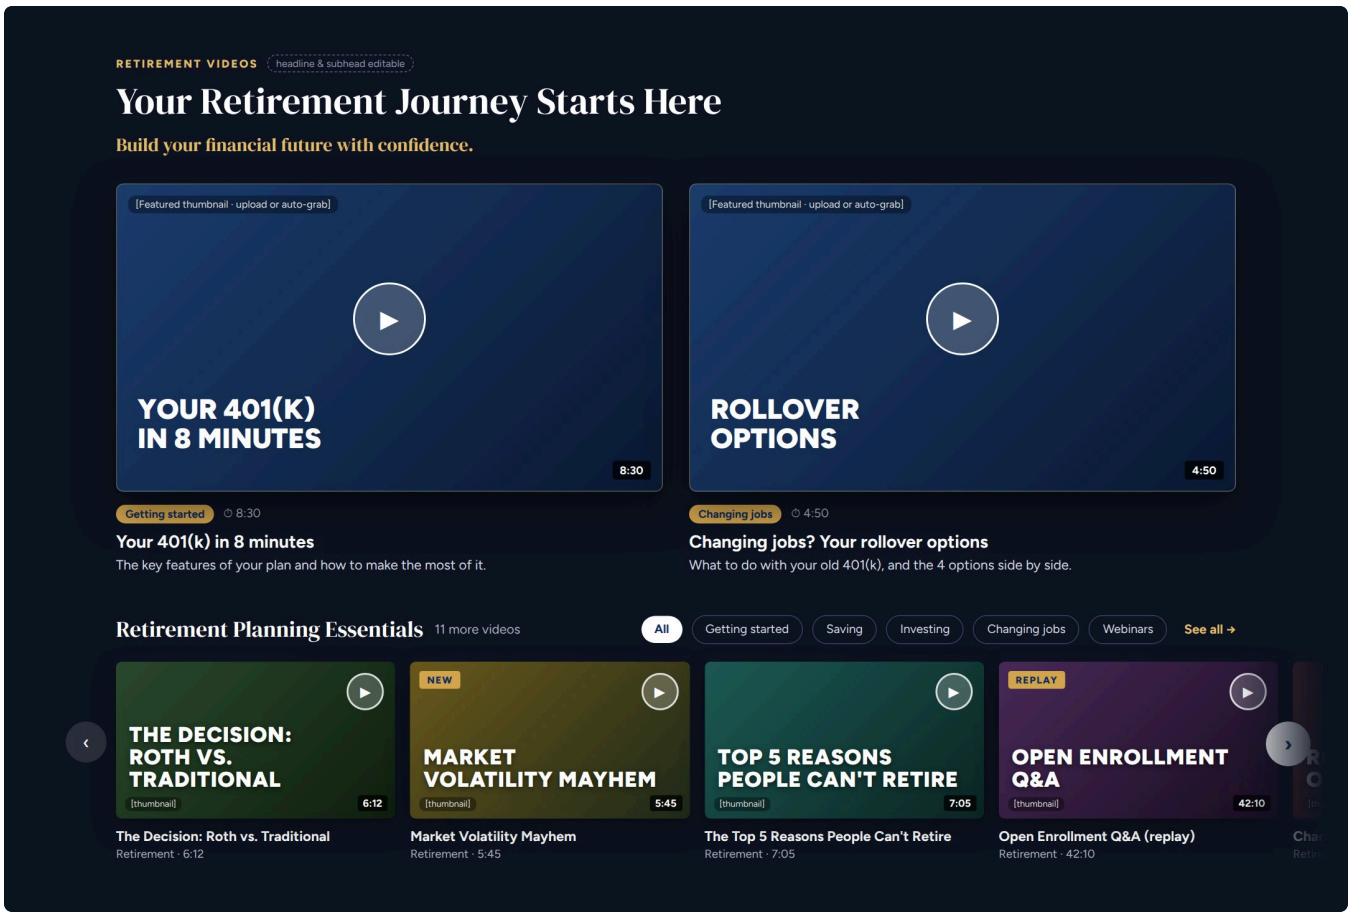

Current reference: today's video page has a featured video in the hero plus a 3-across "Retirement Planning Essentials" carousel.

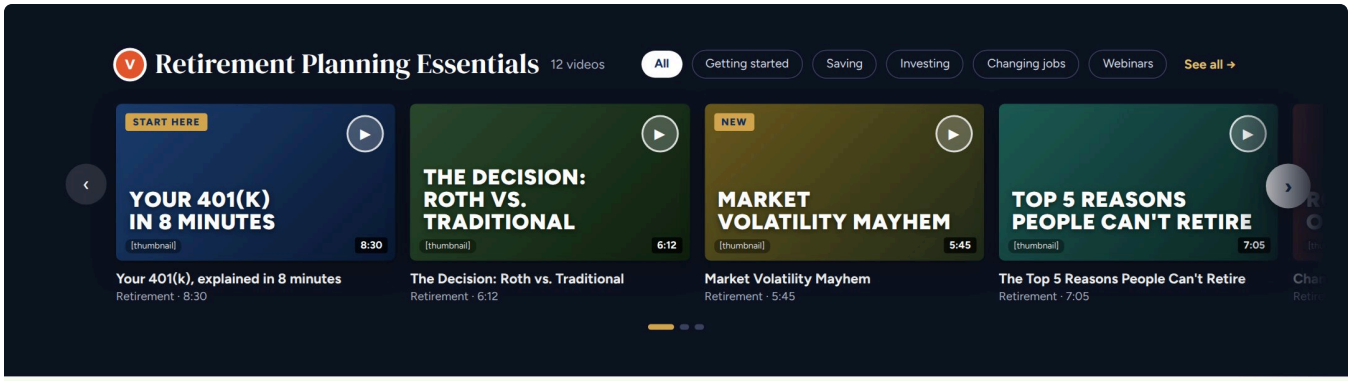

Three layouts. The advisor picks one per page.

1 · Solo Feature (default). Shown in the page mockup above. The left side has a customizable headline and subhead plus the featured video's details (duration, captions, topic chip, description) and **Watch now** / **Questions? Talk to Ty** buttons. The right side has one large featured video. The 4-across carousel of the remaining videos sits below.

2 · Duo Feature. The customizable headline runs across the top, then two large featured videos side by side, each with its topic chip, duration, title, and one-line description. The carousel sits below.

3 · Carousel only. No featured video, just the section title, filter chips, and the 4-across carousel. Best when there are only a few videos or the page is already long.

Customizable headline. Solo and Duo layouts carry an editable **headline** and **subhead** per benefit page. Each category ships with a default the advisor can overwrite:

Category	Default headline	Default subhead
Retirement	Your Retirement Journey Starts Here	Build your financial future with confidence.
Group Health	Get the Most From Your Health Plan	Care, coverage, and costs, explained.
Group Life & Disability	Protect What Matters Most	Coverage for you and the people who count on you.
Other / Custom (e.g. HR Resources)	Everything You Need, Explained	Quick videos on the benefits and resources available to you.

Position. Three settings, not free placement, so every hub stays consistent:

1. **2nd section, directly after the welcome banner (default).**
2. **3rd section, after How Can We Help You Today? and Quick Answers (common questions).**
3. **Hidden.**

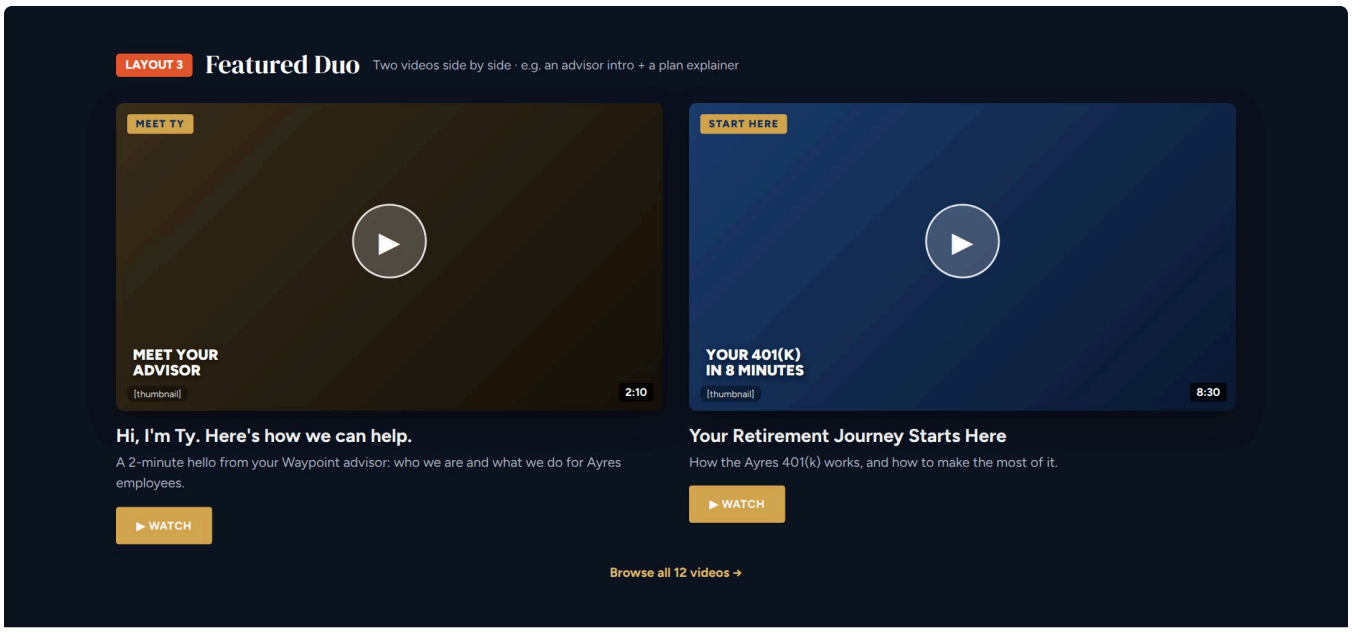

Section rules:

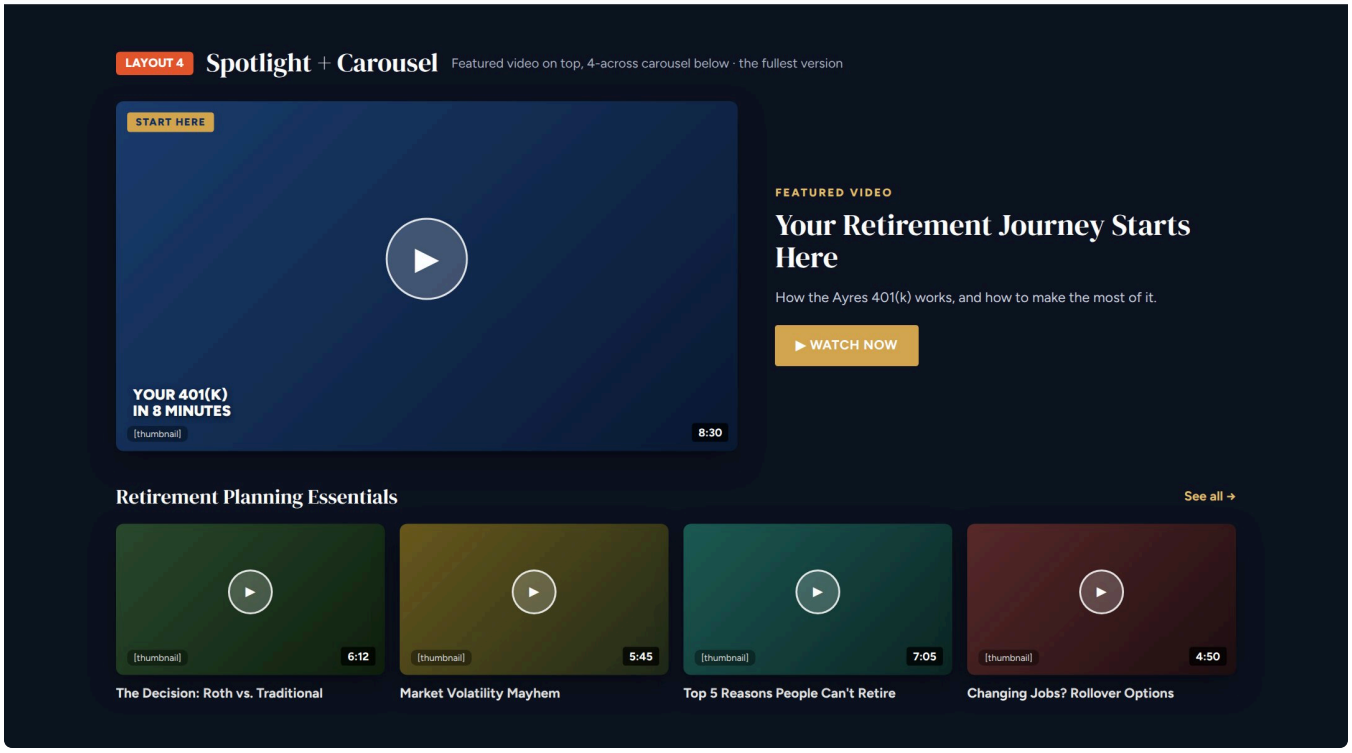

1. **Featured videos** are picked by the advisor (1 for Solo, 2 for Duo). The default is the pinned “Start here” video. Featured videos are removed from the carousel below so nothing repeats.
2. **Carousel: 4 cards across on desktop and laptop,** with a peek of the 5th card at the right edge. Arrows, swipe / trackpad / keyboard scrolling, and page dots. Tablet shows 2.5 across and phone 1.3 across, both swipeable.
3. **Dark band** (navy-black) so the section reads as a “screening room” between lighter sections. Carousel header shows the title, the count, **filter chips** (All · Getting started · Saving · Investing · Changing jobs · Webinars), and **See all →** to the full Video Library.
4. **Each carousel card:** a 16:9 thumbnail (upload, auto-grab, or default-library fallback), poster-style title, play button, duration, an optional badge (**START HERE**, **NEW**, **REPLAY**), and a title and meta line below.
5. **Click to play** in a lightbox player over the page. When the video ends, the lightbox shows the related Quick Answer and the conversion CTA (e.g. “Talk through my options” after the rollover video).
6. **Data:** from the Video Library, filtered by plan + category, in advisor order. Webinar replays from Meetings flow in with a REPLAY badge. Hidden videos never show.

7. **Phone:** the Solo / Duo featured video(s) stack above the carousel, and the headline stays on top.
8. **Section settings:** layout (Solo / Duo / Carousel only), headline, subhead, featured video(s), carousel title, which chips show, max videos, position (2nd / 3rd / Hidden), and autoplay previews (off by default).
9. **Data model:** `VideoSection {plan_id, location, layout: solo | duo | carousel, headline, subhead, featured_video_ids[], carousel_title, chips[], max_videos, position: after_welcome | after_questions | hidden}`.

Phase 2 · Video section layouts (featuring 1 or 2 videos)

The Video section has a **layout picker**, the same idea as the card row layouts. The carousel above is Layout 0. The two layouts below feature 1 or 2 videos (Layout 3 = Duo Feature, Layout 4 = Solo Feature, the default). Layouts 1 and 2 were dropped. All three use the same Video Library data, the same dark band, and the same lightbox player with the post-video CTA.

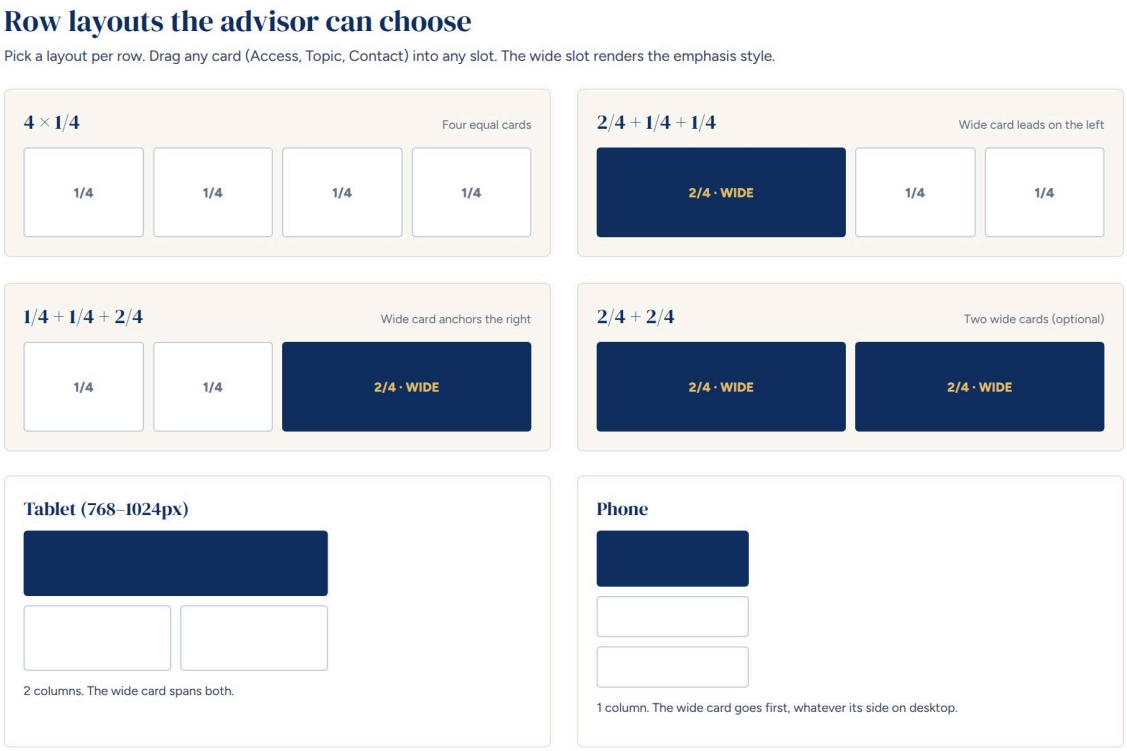

Layout	What it shows	Best for	Phone
0 · Carousel	4 across + peek, filter chips	Large libraries (8+ videos)	1.3 across, swipe
3 · Featured Duo	Two equal videos (2/4 + 2/4), each with title, one-line description, and Watch button	Pairing an **advisor intro ("Meet Ty")** with a plan explainer, or English + Spanish versions	Stacked, one per row

Layout	What it shows	Best for	Phone
4 · Spotlight + Carousel	Layout 1 on top + a 4-across carousel below	Hub home or a category's main video page: the fullest version, closest to today's video page	Spotlight, then swipeable row

Rules:

1. **Featured videos are pinned** in the Video Library (pin 1 for Spotlight + Carousel, 2 for Featured Duo). With nothing pinned, the section falls back to the newest "Getting started" video, then the newest overall.
2. **The carousel** lists the remaining videos in advisor order and never repeat the featured one.
3. **Advisor intro video:** a "Meet [advisor]" video type, set once in Settings › Profile, available to every plan. Great in Featured Duo, or as the Spotlight on hub home.
4. **Automatic fallback:** with 1 video, any layout shows that video featured with no carousel. Featured Duo needs 2+, Spotlight + Carousel needs 3+, and Carousel only needs 5+ (otherwise the row shows static, without arrows).
5. **Placement:** any benefit page, Employee Resources, or hub home. Default position is directly under the welcome banner, and it can be moved down or hidden like any section.
6. **Default for new plans:** Spotlight + Carousel (Layout 4) on every benefit page. Featured Duo (Layout 3) and Carousel only (Layout 0) are the alternatives the advisor can switch to.

How Can We Help row layouts

1. **No full-width single card on desktop and laptop.** The old full-width Account Access block wasted the width. Every row is built from a 4-column grid.
2. **Row layouts the advisor picks per row: 4 × 1/4**, **2/4 + 1/4 + 1/4** (wide card leads), **1/4 + 1/4 + 2/4** (wide card anchors the right), and optionally **2/4 + 2/4**. 2 rows by default; the advisor can add a 3rd row (max 3).
3. **Any card can graduate to the wide slot:** Account Access, a Featured topic (Financial Planning, Rollovers, Social Security …), or a Contact card. The advisor drags it in or uses “Make wide” on the card.
4. **The wide slot renders the emphasis style:** navy background, larger title, and room for extras (Access bullets, a default-library image, the 3-step chips, a second button like “Schedule with Ty”). 1/4 cards use the standard white style, except Access, which stays navy at any size.
5. **Every top card uses inline expansion (same behavior as Desktop option 2).** Clicking a card opens its answer directly beneath that card’s row, full width, with a pointer back to the card, whether it sits in a 1/4 or the 2/4 slot and whether it’s in row 1 or row 2. One answer is open at a time: opening another card closes the first, and Close collapses it. Action Hub cards (e.g. Update My Beneficiaries) also expand inline, showing their per-provider rows. The only exception is the **Account Access** card, whose button goes

straight to the provider login. When Access lists multiple providers, it expands inline to show the provider rows. On phones, the tapped card's answer opens full-screen with a back arrow.

6. **Tablet (768–1024px):** 2 columns, and the wide card spans both. **Phone:** 1 column, with the wide card first regardless of its desktop side.
7. **Default for new plans:** 2/4 + 1/4 + 1/4 with Account Access in the wide slot, then 4 × 1/4. That's 2 rows. The advisor can change each row's layout (orientation) and add a 3rd row.

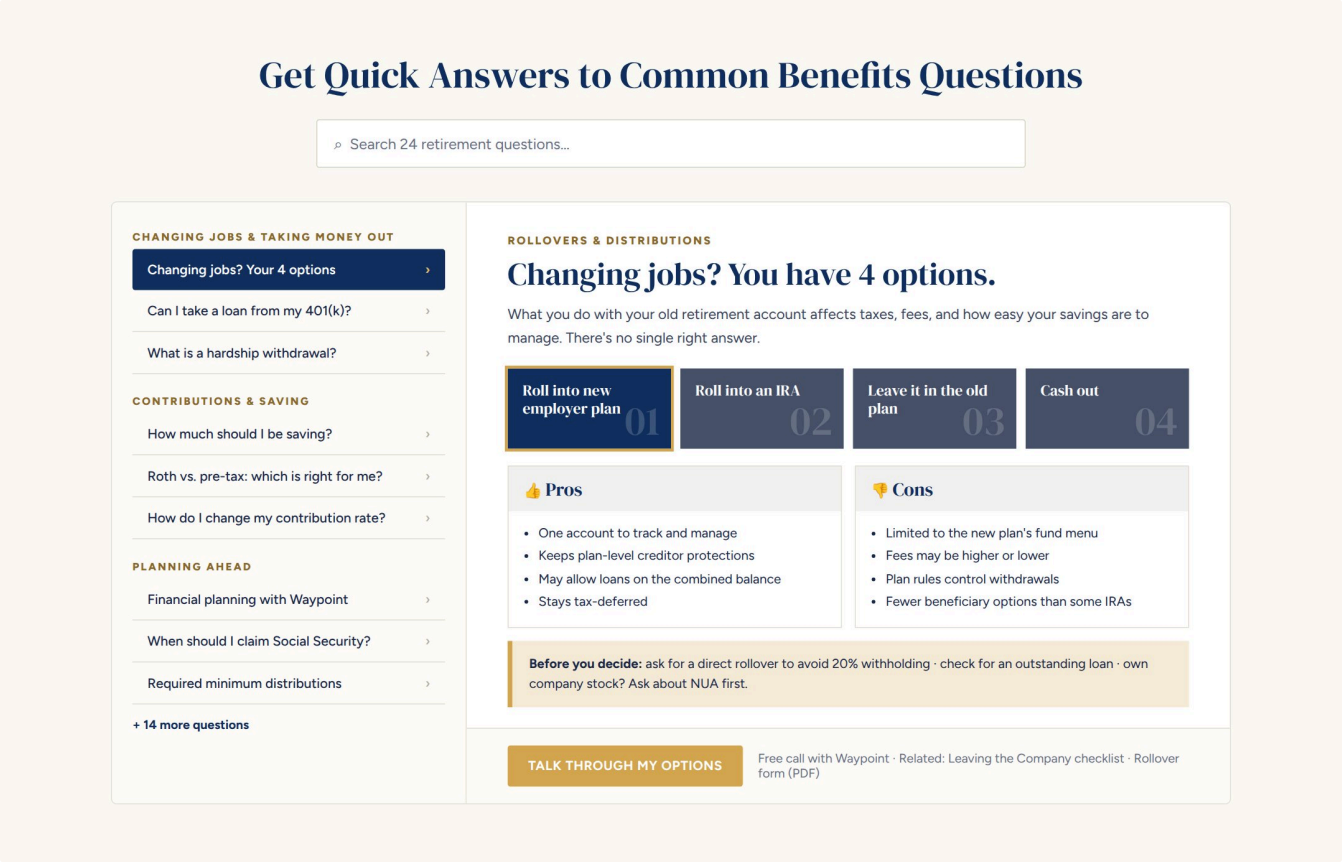

Keep: photo hero with the dark box, "How Can We Help You Today?", the navy Account Access block, the 3-card row, the "Need assistance" band with Schedule Appointment.

1. **“Welcome to Waypoint” advisor welcome inside the hero box:** the lead advisor’s headshot (e.g. Ty Rogers) with a gold ring, a short **first-person, personalized message** (“Hi, I’m Ty…”) naming the sponsor’s plan, a signature line with name, credentials, and firm, the advisor logo, and **Schedule with [first name]** and Meet the team buttons. All fields come from Settings › Profile (headshot, bio message, credentials, scheduler URL). The message is editable per plan so it can name the sponsor, and it goes through compliance review before publishing.
2. **“How Can We Help You Today?” stays, as the Featured Topics section.** It’s a grid of 2 rows by default (max 3) using the row layouts below (4 × 1/4, 2/4 + 1/4 + 1/4, 1/4 + 1/4 + 2/4). The advisor chooses which card graduates to the wide slot: Account Access, or a featured topic like Financial Planning.
3. **Featured cards open in place.** Clicking one opens its full answer directly beneath the card row, full width, with a pointer back to the card. Rollovers shows its 01–04 tiles, pros and cons, Before you decide, and the Talk through my options CTA. Close collapses it. There are no separate pages.
4. **“Get Quick Answers” below holds every other FAQ**, grouped, in a **two-column version of today’s navy accordion** with search on top. A topic is either Featured (above) or in Quick Answers (below), never both.
5. **Richer answers in the accordion:** quick answer, steps, linked doc and video, and a CTA.

How Can We Help (featured) + Quick Answers (all other FAQs)

Decision: each benefit page has two question areas, matching the Featured / Quick Answers display modes. **“How Can We Help You Today?”** holds the Access card plus 3–4 **Featured topic cards** that open their answer in place, full width, beneath the card row (see the Retirement page mockup above). **“Get Quick Answers”** below holds **every other FAQ** in a searchable, grouped list. Rollovers and Financial Planning are **not separate pages**. They are Featured topics whose answers open in place. The layout options below are for the Quick Answers area; the recommendation is at the end.

Desktop option 1: question list + answer panel

1. **Search bar** across the top filters questions in this category.
2. **Left column:** questions in named groups (Changing Jobs & Taking Money Out, Contributions & Saving, Planning Ahead …). The selected question is highlighted navy. Long lists show the first ~10 plus "+ N more questions."
3. **Right panel:** the selected answer at full width. Simple topics show the content blocks from Section 5 (quick answer, steps, doc, video, contact, CTA). Rich topics show their template: Options Compare for Rollovers (01–04 tiles, pros and cons, Before you decide), Process Steps for Financial Planning, and Checklist for Life Events.
4. **Footer bar** in the panel: the conversion CTA plus related links. It stays visible at the bottom of the panel.
5. **The panel is sticky** while the question list scrolls, so the answer never scrolls away.
6. **Default selection** on page load: the first Featured topic, or the one named in the URL.

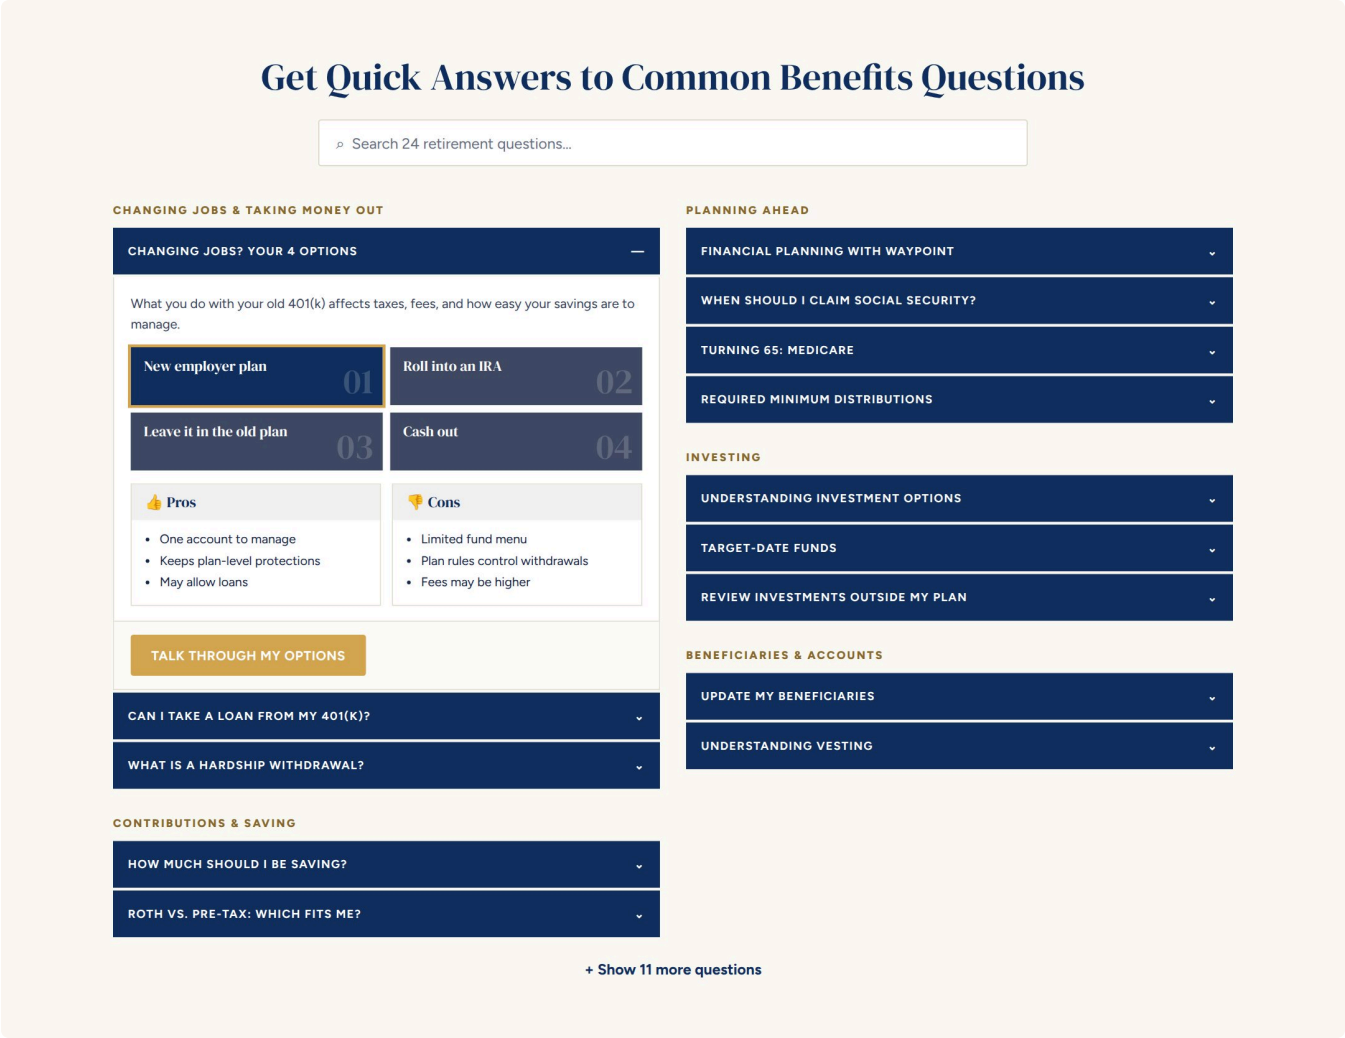

Desktop option 2: question cards with inline answer (recommended)

1. Each group shows its questions as **cards, 3 per row**: icon, question, a one-line teaser, and “Read answer →.” Rich topics carry a chip (“4 options,” “3 steps,” “Compare”).
2. Clicking a card **opens its answer full-width directly beneath that row**, with a pointer back to the card. Only one answer is open at a time, and Close collapses it.
3. Rich topics get the whole content width, so the Rollovers 01–04 tiles and pros / cons display exactly as they do today.

4. On phones the cards stack 1-up, and tapping a card opens the full-screen answer view (same as the phone section below).
5. Groups show 6 cards, then "+ Show N more questions."

Desktop option 3: side-by-side accordion

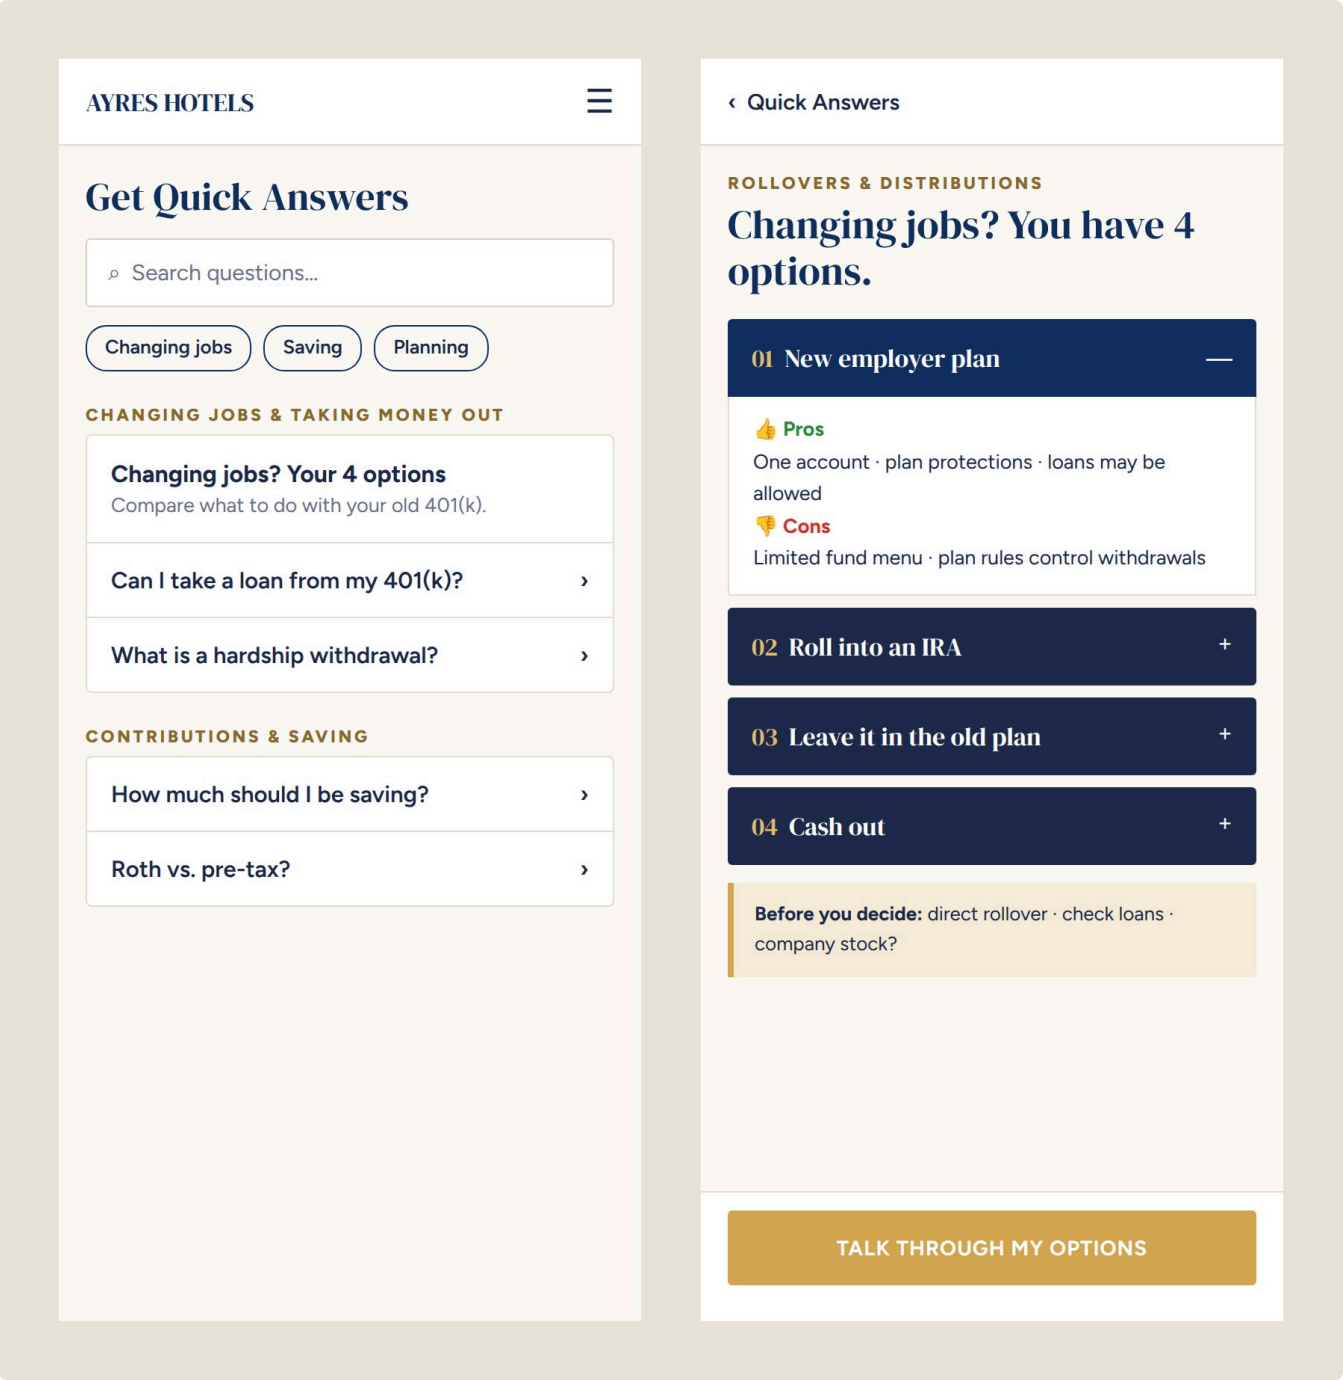

1. The existing navy accordion bars, **split into two columns** by group, so the list is half as long.
2. Answers expand in place within their column.
3. Closest to what's built today, and the least development work.
4. **Downside:** rich topics are squeezed into half width (Rollovers tiles drop to 2 × 2), and expanding one column makes the two columns uneven.

Which one for Quick Answers?

	Option 1 · List + panel	Option 2 · Cards	Option 3 · Side-by-side accordion
Scannability	Good	Best	Good
Room for rich topics	Full	Full	Half width
Change from today	Largest	Medium	Smallest
Build effort	Medium	Medium	Low
Page length	Fixed	Grows with the open answer	Grows with the open answer

Recommendation: use the **card behavior (option 2) for How Can We Help** and the **side-by-side accordion (option 3) for Quick Answers.** Featured topics are few and rich, so they get big cards with full-width inline answers. The remaining FAQs are many and mostly short, so a compact two-column accordion in today's navy style keeps the page shorter and looks clearly different from the featured cards. If a template topic (Options Compare, Process Steps) is placed in Quick Answers instead of Featured, its opened answer spans both columns so it isn't squeezed. Option 1 (list + panel) stays documented as a Path A alternative.

Phone: vertical

1. **Search plus group chips** at the top. Groups stack as white lists with tall tap rows.
2. **Tapping a question opens its answer full-screen** with a back arrow to the list. It's a view within the page, not a new page.
3. **Options Compare stacks vertically:** each option is a navy bar, one open at a time, with short pros and cons.
4. **Sticky CTA** at the bottom of the answer view.

Rules

1. **One URL per answer:** `…/retirement#rollovers`, plus `&option=ira` for a specific option. Marketing, email, the Ask bar, and Life Event steps link straight in.
2. **Featured and Quick Answers never duplicate.** A topic is placed either as Featured (a card under How Can We Help, whose answer opens in place) or in Quick Answers, not both. Promoting or demoting a topic in the builder moves it between the two areas.
3. **Same framework in every category and in Employee Resources.** Only the questions and groups change.
4. **Browser back works:** on desktop it returns to the previous selection, and on phone it returns to the list.
5. **Accessibility:** the question list is a list of buttons, the panel is a live region, and there's full keyboard support (arrow keys move between questions).

FAQ library, custom questions, and graduation:

1. **20+ default questions per category** ship prefilled in Quick Answers (more for Retirement and Group Health). The count depends on the category's library (Sections 15–16).
2. **Custom questions:** the advisor can add their own Q&As to any group, using the same content blocks and CTA options as the defaults.
3. **Graduate to Featured:** any Quick Answer, default or custom, can be promoted to a card in How Can We Help ("Make featured"), up to the Featured limit (3 rows max). Promoting removes it from Quick Answers, and demoting puts it back in its group, so a question is never shown twice.
4. **At the limit,** the builder asks which featured card to move down before the new one goes up.

Trade-off accepted: on desktop, only one answer shows at a time, while an accordion allows several. Participants typically read one answer and act.

News & Events

Keep as is. Wire each section to its module so nothing is hand-built:

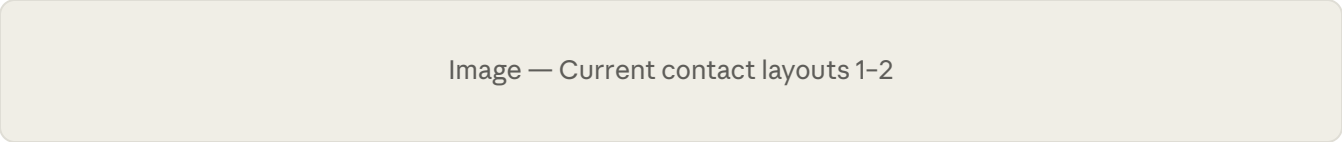

Section	Source module
Announcements	Marketing (announcements)
Upcoming Meetings & Webinars	Meetings (upcoming, sorted soonest first)

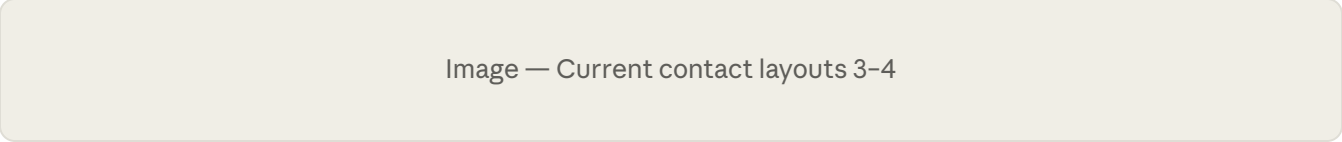

Section	Source module
Webinar Replays	Video Library (replays)
Resources & Downloads	Documents (marketing / OE materials)

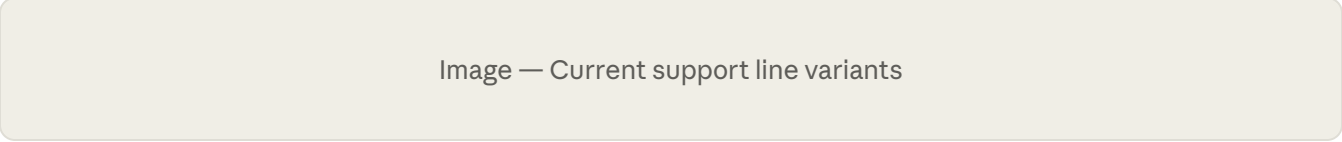

Empty sections hide automatically, and there is no placeholder copy on live hubs.

My Benefits Team

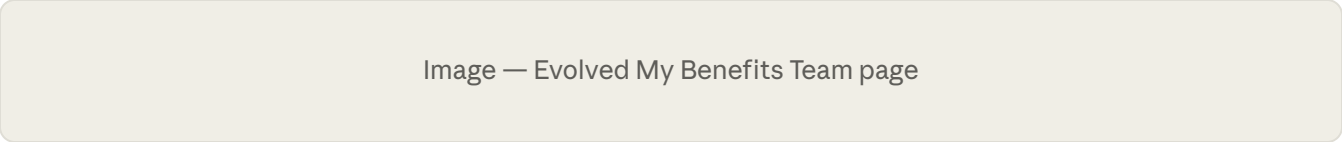

Current: 4 contact layout options plus 3 support-line variants, built as separate hand-built blocks.

Evolved: one Contact module in the same style. The layout is chosen automatically from the data, so the advisor never picks from 4 options.

Keep: the navy featured contact (Option 1 hero), the white contact cards with provider logo, photo, name, title, company, email, phone, and gold Schedule button, the support-line phone buttons, and the footer.

1. **Filter chips** (All · HR · Retirement · Health · Life · Custom), in canonical order. Hidden categories drop out.
2. **One featured contact** in the Option 1 navy style, usually the sponsor's HR lead. Adds a "Start here for" list so employees know what HR handles. The advisor can choose who is featured.

3. **Contacts grouped by benefit category,** each group headed by its provider or team name. Groups with 1–2 contacts use horizontal cards in a 2-up grid (Option 3 style). Groups with 3+ use the vertical 4-up cards (Option 4 style).
4. **Support line is a group-level field** (team name, phone, hours) shown as a button in the group header. It replaces the 3 separate Support Line layouts and covers shared lines like “BeneWorks Team Support.”
5. **Graceful fallbacks:** no photo → initials or provider logo. No scheduler link → the button becomes Email or Call. Phone numbers are tap-to-call on mobile.

Single source: each contact is entered once (Contacts module / Create Benefits category contact) and reused on this page, the category page Contact card, Action Hub rows, Topic Page CTAs, and Navigator handoffs.

Retire: Contact Layout Options 2 and 3 as separate choices (duplicate-name overlap bug visible in the current build), placeholder “Logoipsum / Name Here” content on live hubs, and the separate Support Line page blocks.

What changes in the build under Path B

1. **TF-10:** topic templates render inside the **Quick Answers answer panel** (desktop two-pane, phone full-screen answer view). No Topic Pages or slide-over Sheets.
2. **TF-9:** card presets map to the existing card styles (navy Access block, white Featured topic cards, Glance cards). Glance cards link to their benefit page. Featured topic cards open their answer in place under How Can We Help.
3. **Action Hub panel** opens as a modal in the existing style.
4. **Mobile:** existing responsive templates, plus the vertical Quick Answers list and a sticky CTA in the answer view.
5. **Contacts / My Benefits Team:** one Contact module with Featured + Standard card presets, auto layout by count, category groups, and a group-level support line (see My Benefits Team above).

What doesn't make sense to keep

1. Separate standalone pages for Rollovers, each rollover option, and Financial Planning (now answers in Quick Answers).
2. The navy accordion (replaced by Quick Answers).
3. Hand-typed Glance card copy (causes the placeholder text and gaps seen today).
4. Hard-coded group labels like “Optional retirement adds.”

5. Provider logos with no login link. The logo stays, and the link is added.

Path A · Full redesign: what participants see

High-fidelity mockups of the finished Benefits Hub, using the Ayres / Waypoint demo branding (navy + gold, serif display over clean sans). Colors and logo swap per plan from Branding settings. Bracketed text is placeholder data.

Hub home (desktop)

Image — Hub home desktop, top half

Image — Hub home desktop, bottom half

The sponsor owns the top of the landing page. The page opens with a company welcome message: headline, 1–2 paragraphs, signed by an HR or leadership contact, next to a company photo. The Air Fayre “Welcome to the Benefits Hub” and “We care about people” blocks are the reference for tone, rebuilt as one clean module. Below it: the “All your benefits, in one place” Ask bar → benefit category tiles → Find my accounts → benefits team + next meeting → Life Events.

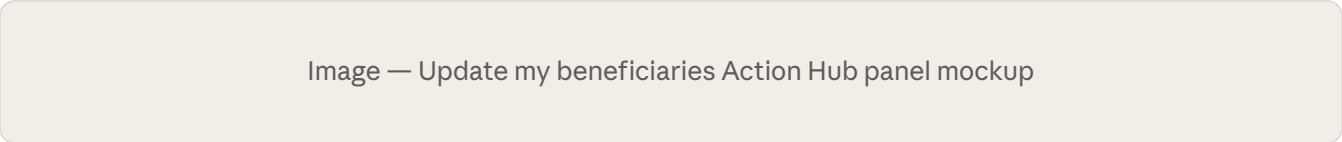

Retirement category page (desktop)

Image — Retirement page desktop, top half

Image — Retirement page desktop, bottom half

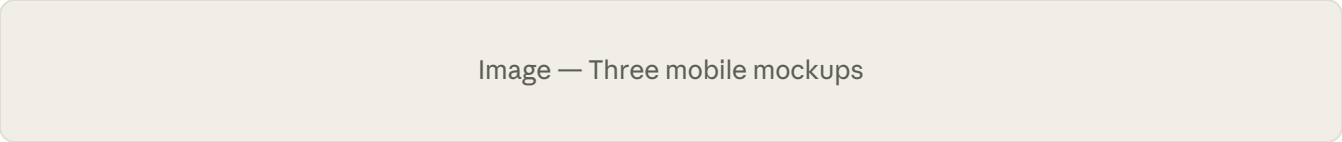

The advisor owns the top of each benefit category page. The hero is an advisor welcome: headline, a short message in the advisor's voice, their team cards (photo, name, credentials, role), the advisor logo, and Schedule / Meet the team buttons. It pulls from Settings (Profile + Branding + Team), so it's set up once and reused on every plan. The rest of the template is unchanged: Access card, Featured cards, insurance Access + Contact, Quick Answers, and documents / meetings.

Action Hub panel (desktop)

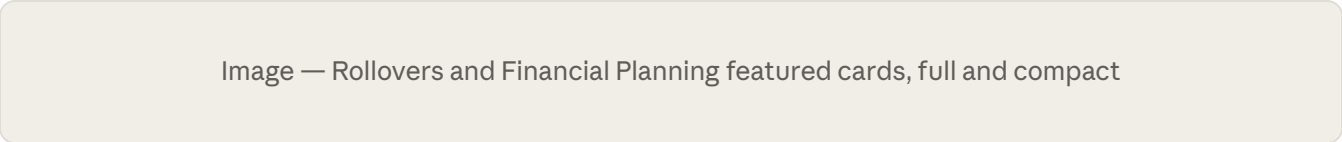

Opens from any "Update my beneficiaries" card or row. It shows one row per active benefit with that provider's link, plus a sticky conversion CTA.

Mobile: hub home · Rollovers answer view · Life Event checklist

Bottom nav (Home, Benefits, Life Events, Ask). Category tiles go 2-up. Rollovers opens as a full-screen answer view with swipeable options and a sticky "Talk through my options" button. Life Events render as a numbered checklist with a deadline banner, with each step linking into its benefit.

New Rollovers & Financial Planning cards

Both use the same Card module. The **half-width preset** adds an image from the default library, a tag chip, and a built-in preview of what's inside: the 4 options for Rollovers and the 3-step process for Financial Planning. A secondary text link goes straight to the conversion CTA. The **compact preset** is the same card at quarter width in a 4-up Featured row.

Rollovers & Financial Planning in Path A

Path A uses the same **Quick Answers** explorer as Path B (see Path B › Quick Answers), restyled with Path A's cards, colors, and type. The slide-over Topic Sheets from earlier drafts are **retired**: rich topics render in the Quick Answers answer panel on desktop and in a full-screen answer view on phones.

2. Current state: Air Fayre demo

Reference page: waypointfas.com/air-fayre-demo-v2-retirement/

Image — Current featured cards: Retirement Account Access block plus three topic cards

Screenshot 1: "How Can We Help You Today?" Account Access block plus three featured cards.

Image — Current accordion: Quick Answers list plus Optional Retirement Adds

Screenshot 2: "Get Quick Answers" accordion with a second "Optional retirement adds" group.

What works (keep)

1. Account Access block at the top with Plan ID and one primary CTA
2. Three-card featured row with short copy and one CTA each
3. Accordion for the long tail of questions
4. Grouping idea ("Optional retirement adds") — formalize it as accordion groups

Gaps (fix)

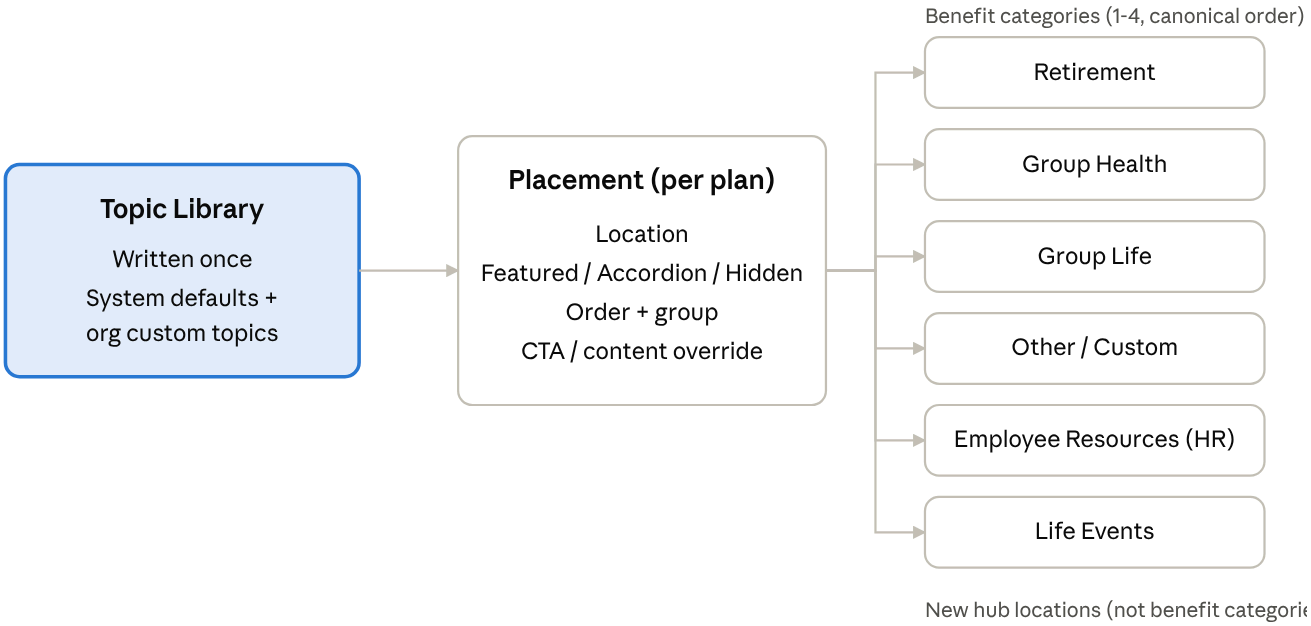

1. Hand-built page; nothing is reusable across Group Health, Group Life, or Custom
2. Cards and accordion items are different objects, so a topic can't move between them
3. Accordion bodies are text plus one link; two items show identical placeholder copy
4. No way for an advisor to choose, reorder, or hide topics
5. Beneficiaries only exists in Retirement even though Group Life also needs it
6. No HR or life-event content (address change, new baby, leaving the company)
7. No search across topics

3. Core concept

Three objects:

1. **Topic:** the content (title, summary, body blocks, icon, tags). Lives in a library. Written once.
2. **Placement:** puts a topic somewhere for one plan. Holds display mode, order, Quick Answers group, and optional CTA or copy overrides.
3. **Location:** where placements render. The four benefit categories plus two new hub locations: Employee Resources (HR) and Life Events.

One topic library, many placements, six locations

Topic framework · library → placement → location

One topic can have many placements. "Update My Beneficiaries" is written once and placed in Retirement, Group Life, and Employee Resources, each with its own CTA.

Display mode rules

Mode	Renders as	Limit
Featured	Card in the top row	2 rows by default, max 3 rows (up to 12 card slots)
Quick Answers	Question in the Quick Answers list	No limit; grouped
Hidden	Not shown to participants	—

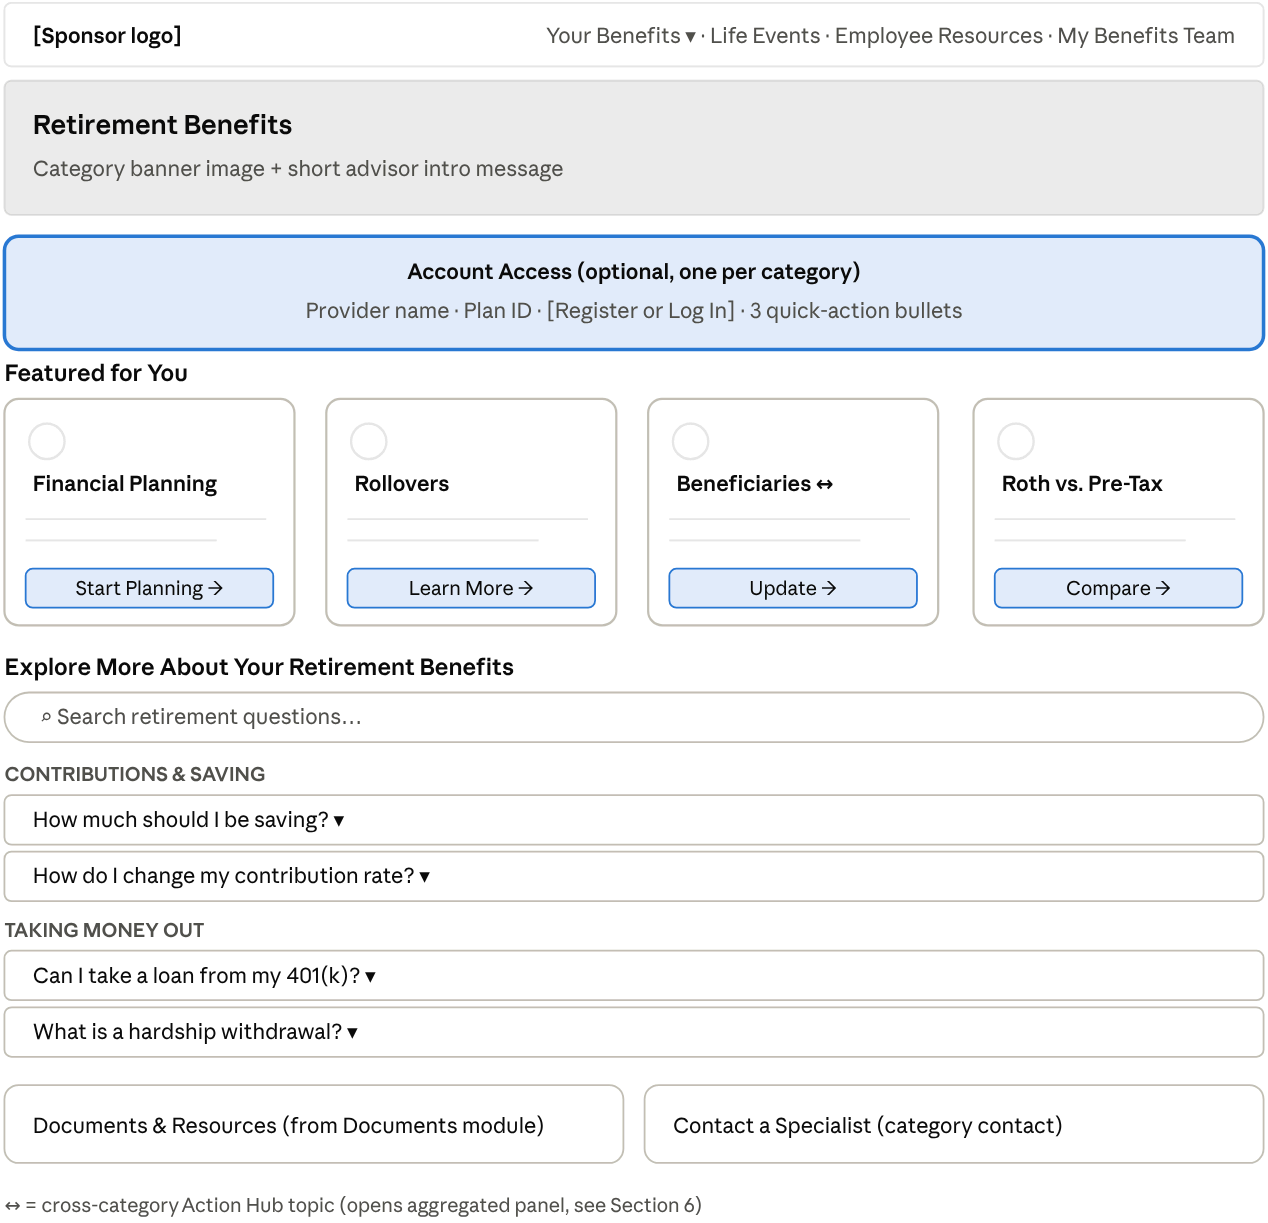

Rendering rules

1. Hidden benefit categories hide their placements everywhere, including inside Action Hubs and Life Events.
2. A location with zero visible placements shows no Featured or Explore section (no empty headers).
3. All placements are plan-scoped. The library is shared; placements never cross plans.

4. Participant page layout

Every location (Retirement, Group Health, Group Life, Custom, Employee Resources) uses this same page template.

Wireframe: participant benefit category page

↔ = cross-category Action Hub topic (opens aggregated panel, see Section 6)

Participant category page · top to bottom

Section order (fixed)

1. **Category hero:** on benefit category pages, an advisor welcome (message, team cards, logo, Schedule CTA) from Settings. On hub home, a sponsor welcome message (headline, copy, signer, company photo)
2. **Account Access block:** an Access card, placed here by default but movable anywhere on the page (see Section 9)

3. **Featured for You:** 3–4 cards, 4-across desktop, 2-across tablet, 1-across mobile
4. **Quick Answers:** grouped question list + answer panel (desktop), vertical list (phone)
5. **Documents & Resources:** existing Documents module filtered to this category
6. **Contact a Specialist:** existing category contact

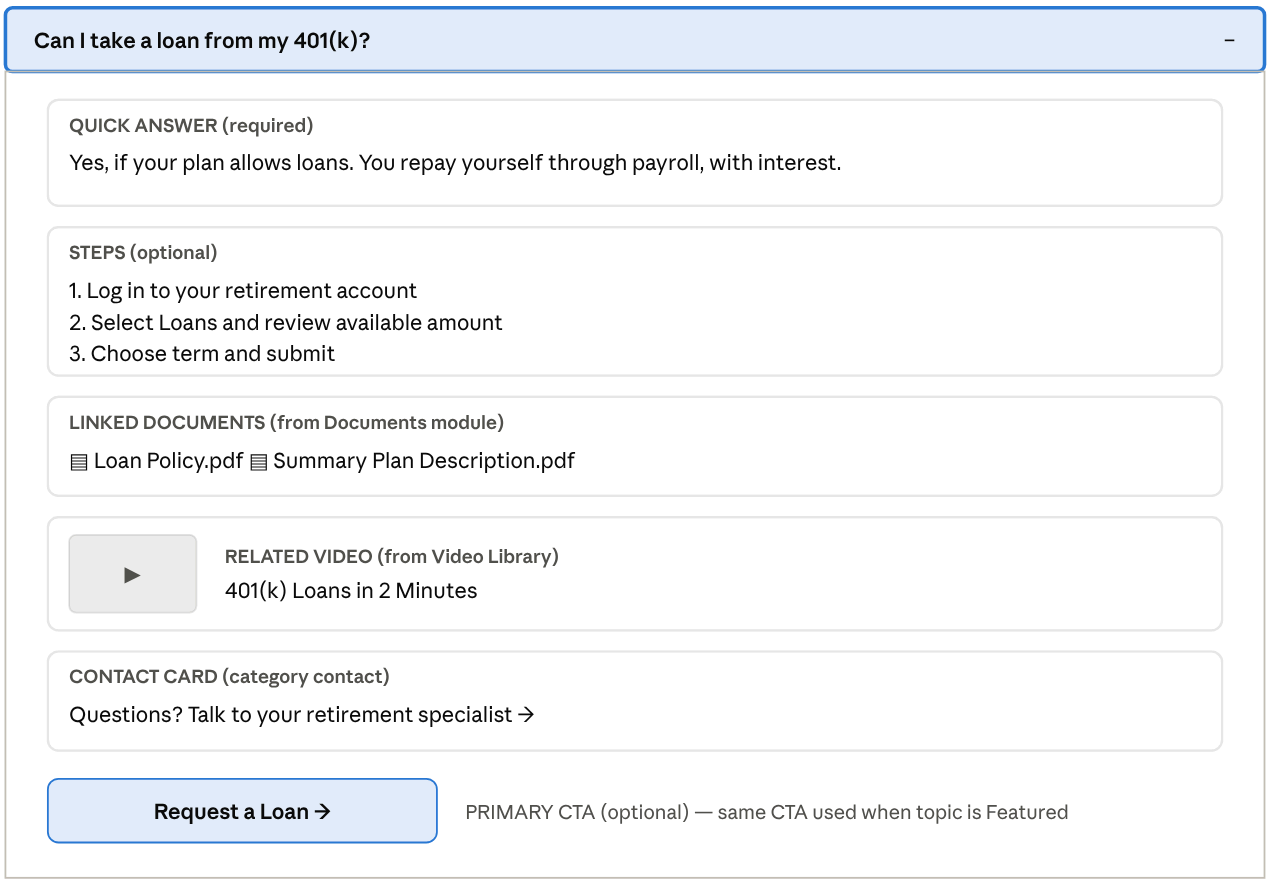

Card spec

1. Icon or small image (top-left)
2. Title (max ~30 characters)
3. Summary (max ~110 characters, 2 lines)
4. One CTA button, full card width
5. CTA action types: external link, open topic detail (modal), open document, open contact, open Action Hub panel

5. Quick Answers (replaces the accordion)

The accordion is replaced by **Quick Answers**: a grouped question list plus a full-width answer panel on desktop, and a vertical list with a full-screen answer view on phones. Layout, mockups, and rules are in Path B › Quick Answers. This section defines what goes *inside* an answer: ordered **content blocks**, where blocks with no data don't render. The item wireframe below shows the block stack as it appears in the answer panel.

Wireframe: expanded accordion item

Accordion item · six content block types

Content block types

Block	Source	Required
Quick Answer	Topic text (2–3 sentences)	Yes
Steps	Topic text (numbered list)	No
Linked Documents	Documents module, same plan + category	No
Related Video	Video Library, same plan	No
Contact Card	Category contact from Create Benefits	No
Primary CTA	Placement CTA (shared with card mode)	No

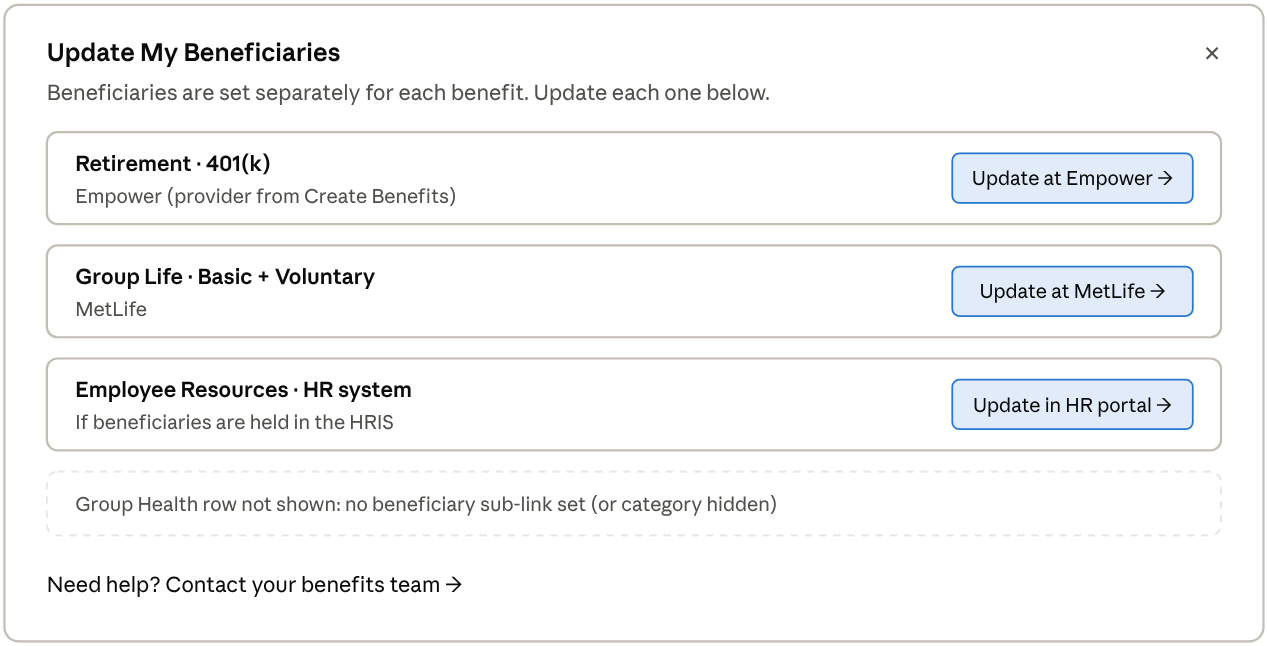

Quick Answers behavior

1. **Groups:** each location has named groups (e.g. Changing Jobs & Taking Money Out, Contributions & Saving, Planning Ahead). Advisors can rename, add, and reorder them.
2. **Search:** filters titles, quick answers, and tags within the location. Phase 2: hub-wide search.
3. **One answer at a time:** in the panel on desktop, or in the full-screen view on phones.
4. **Deep links:** every answer has its own URL (…/retirement#401k-loans), plus `&option=` for Options Compare topics.
5. **Rich topics render in the same panel** using their template (Options Compare, Process Steps, Checklist, Calculator). There are no separate pages or Sheets.

6. Cross-category Action Hubs

Some actions apply to several benefits at once. Employees think "I got married," not "I need to update two separate beneficiary records." An **Action Hub** is a topic flagged as cross-category. Its CTA opens one panel that lists a row per category, each with that category's own link.

Wireframe: Action Hub panel (Update My Beneficiaries)

Action Hub panel · one row per active category

Rules

1. Action Hub = topic with `is_action_hub = true` and one **sub-link per location**.
2. Sub-link sources, in priority order: (a) advisor-entered URL on the placement, (b) provider portal URL from Create Benefits, (c) category contact.
3. A row renders only if its category is visible AND it has a sub-link.
4. If only one row qualifies, the CTA goes straight to that link (no panel).
5. The same Action Hub can be Featured in one location and in Quick Answers in another. The panel is identical wherever it opens.
6. Display with a ↔ badge in admin so advisors know the edit affects several places.

Launch set

Action Hub	Rows it can show
Update My Beneficiaries	Retirement, Group Life, HR
Change My Address	Retirement, Group Health, Group Life, HR (payroll)
Change My Name	Retirement, Group Health, Group Life, HR
Add or Remove a Dependent	Group Health, Group Life, Custom (dental/vision)
Update Direct Deposit / Tax Withholding	HR (payroll)
Get My ID Cards / Account Logins	Retirement, Group Health, Group Life, Custom

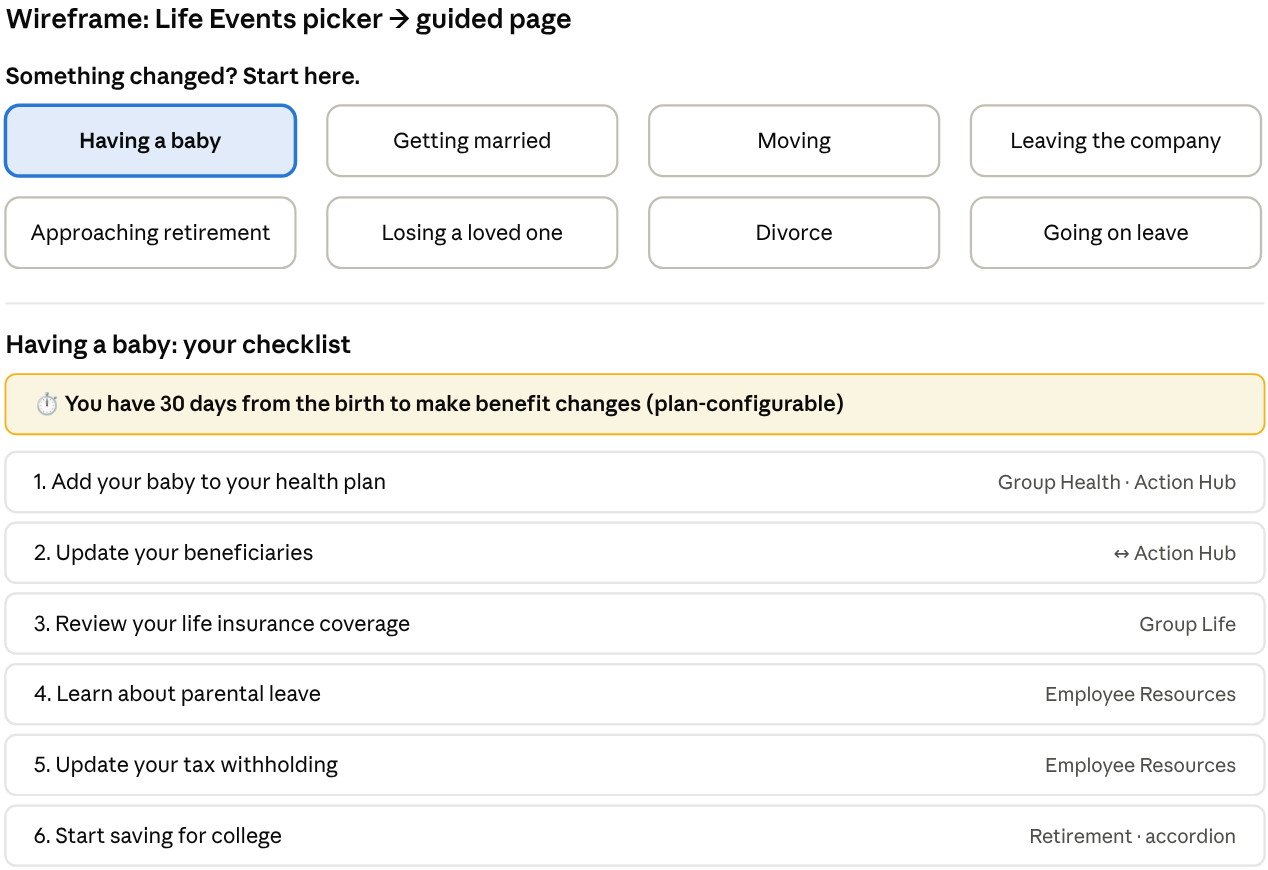

Why this matters: address and beneficiary updates are a top source of HR tickets, because each carrier and recordkeeper holds its own record. One panel that says "update it here, here, and here" is the most direct value we can show an HR buyer.

7. Life Events and Employee Resources (HR)

These two locations are the HR play. They make the hub useful to the HR professional, not only the advisor, and they don't require new content. They reuse existing topics.

7a. Life Events

A Life Event is an **ordered checklist of existing topic placements** pulled from any location. It is a new view, not new content.

Life Events · picker + guided checklist

1. Each step links to the topic's Quick Answers link or opens its Action Hub panel.
2. Steps whose category is hidden drop out automatically.
3. Optional deadline banner (e.g. 30-day qualifying event window). The number of days is plan-configurable, and the banner is hidden if blank.
4. Default templates ship for all 8 events. Advisors can add, remove, or reorder steps.
5. Entry points: top nav "Life Events," a hub home strip, and deep links for marketing ("New to the family? Here's your checklist").

7b. Employee Resources (HR hub)

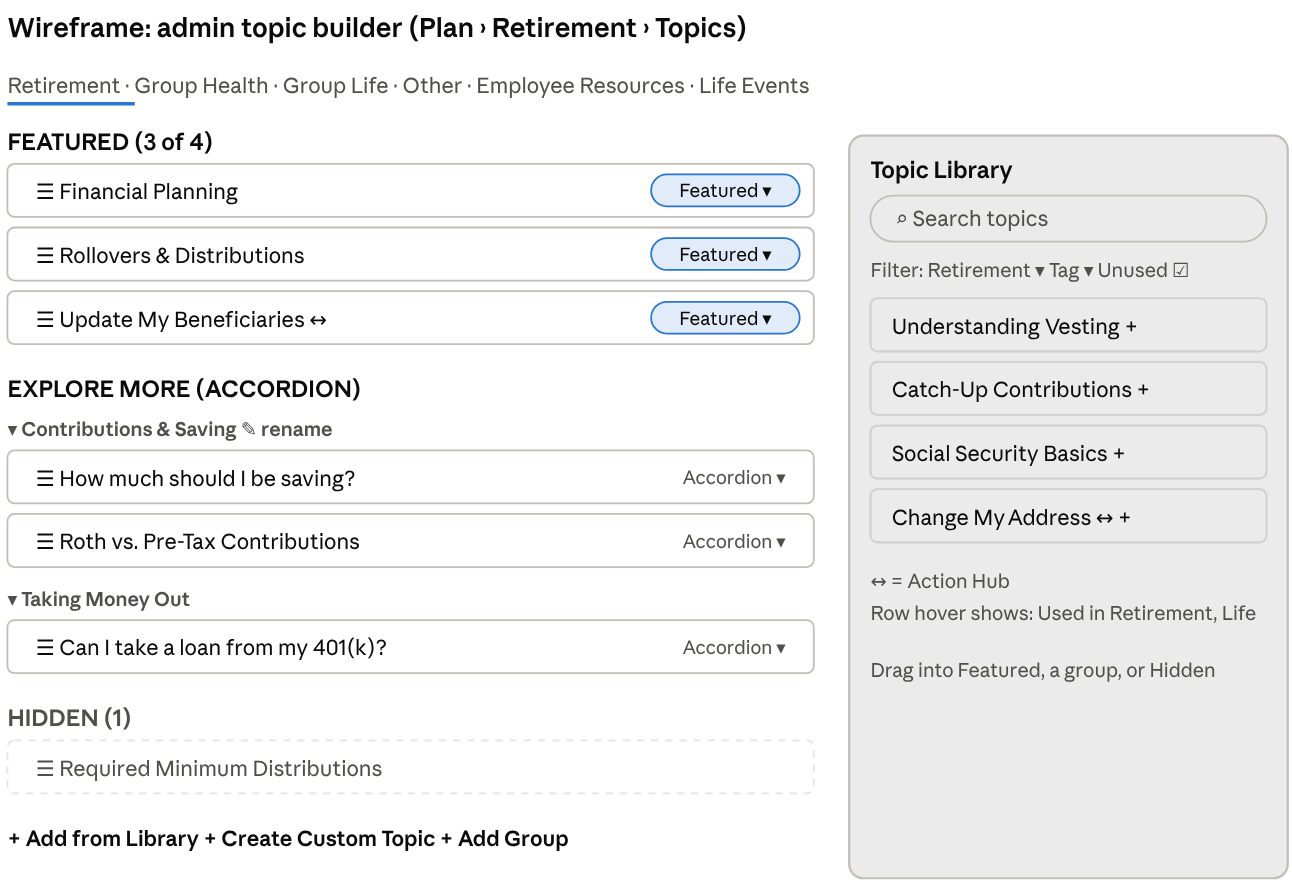

A fifth page that uses the same template as a benefit category (hero, featured cards, Quick Answers, documents, contact). It is **not** a benefit category. It doesn't count toward the 1–4 limit and sits after the categories in navigation.

Featured (default)	Quick Answers (default groups)
Change My Address ↔	**Pay & Taxes:** pay stubs, W-2, direct deposit, withholding
Pay Stubs & Direct Deposit	**Time Off & Leave:** PTO policy, FMLA, parental leave, holidays
Time Off & Leave	**Policies:** handbook, code of conduct, reporting concerns
Who Do I Contact?	**Employment:** verification of employment, name change ↔, onboarding, offboarding / COBRA

Ownership: Employee Resources content is typically owned by the sponsor's HR contact. It should be assignable to a Collaborator (HR) with edit rights on this location only. This ties into the existing collaborator model and gives HR a reason to log in.

8. Admin builder UX

The builder lives inside each plan as a **Topics** tab per location, next to the existing Create Benefits setup. It works like a playlist, with three zones and drag between them.

Admin builder · playlist + library drawer

Interactions

1. **Three zones:** Featured, Quick Answers (grouped), and Hidden. Drag between zones or use the row dropdown (Featured / Quick Answers / Hidden).
2. **Featured cap:** max 3 rows (2 by default). When Featured is full, the builder asks which card to move down to Quick Answers before a new one can graduate.
3. **Row click opens editor drawer:** title, summary, icon/image (default image library), content blocks, CTA label + action type + destination, tags.
4. **Edit scope prompt:** when editing a library topic, ask "Change for this plan only" (writes placement override) or "Change the topic everywhere" (org-level custom topics only; system defaults can only be overridden per placement).
5. **Library drawer:** search, filter by location / tag / unused, drag in. Hover shows "Used in" locations.
6. **↔ badge** on Action Hubs. The editor shows the sub-link per location and flags any missing sub-link.
7. **Preview button** jumps to the participant page at this location.

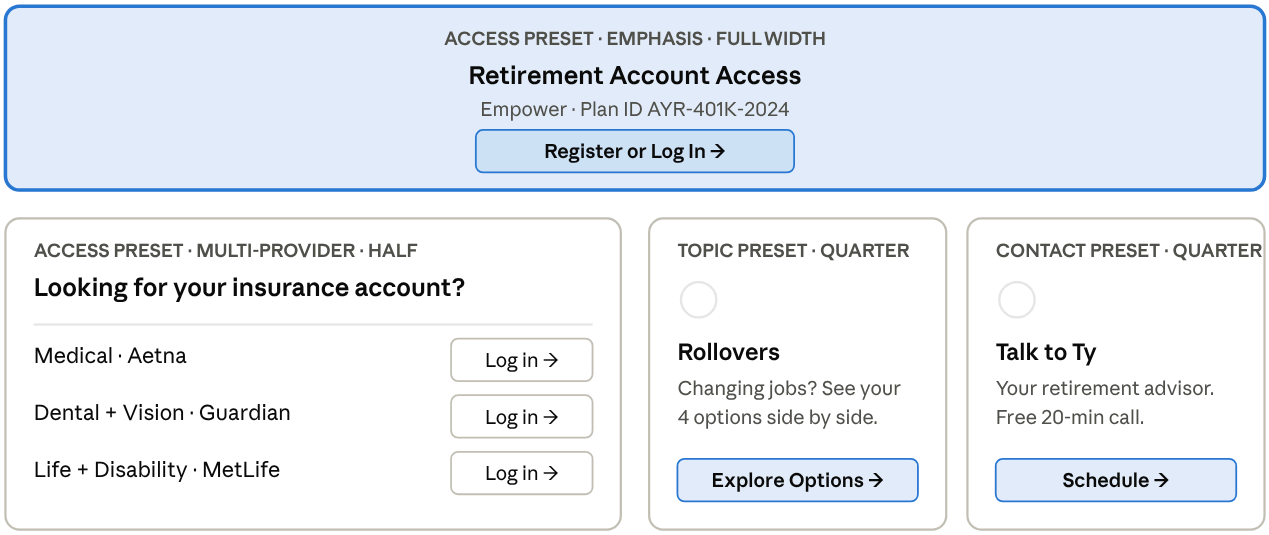

8. **Completion state:** a location counts toward Create Benefits "Complete" only if it has at least 1 Featured topic OR the advisor accepted the defaults. It never blocks completion on its own.

9. One card module

Decision: one Card component with **presets**, not separate card types. A preset only sets default style, width, and prefilled data. Every card has the same fields, the same editor, and the same placement rules. This keeps admin editing simple while allowing a lot of variation.

One card module, four presets

Same component and fields. Preset = default style + width + prefilled data.

Card fields (all presets)

Content: eyebrow · icon or image · title · body · up to 3 bullets · provider rows (Access only)

Actions: primary CTA · optional secondary CTA · action type (link, Topic Sheet, doc, contact, Action Hub)

Look: style (standard / emphasis) · width (quarter / half / full) · image from default library

Placement: any page section, any location, drag to reorder · show / hide

Prefill: Access rows from Create Benefits providers; Contact from category contact; Topic from library

Card module · four presets, one component

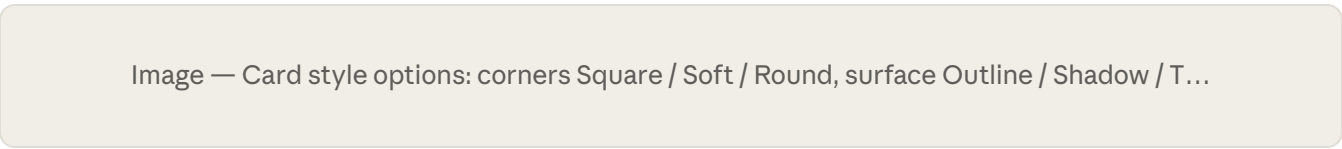

Presets

Preset	Default look	Prefilled from	Typical use
Access	Emphasis, full width	Provider name, login URL, Plan ID (Create Benefits)	"Retirement Account Access"
Access (multi-provider)	Standard, half width	All providers in the category or plan, one row each	"Looking for your insurance account?"
Topic	Standard, quarter width	Topic library	Featured topics
Contact	Standard, quarter width	Category contact + scheduler link (Settings)	"Talk to your advisor"

Rules

1. **Access is not fixed to the top.** It is a card like any other. It defaults to the first position when a category is created, but it can be dragged anywhere, resized, or hidden.
2. **Insurance access:** the multi-provider Access preset auto-lists every carrier entered in Group Health / Group Life / Custom (medical, dental, vision, life, disability), one "Log in" row each. It can be placed on one category page or on hub home as a single "Find my accounts" card.
3. **Page = ordered sections.** Section types: Hero, Video Carousel, Card Row, Quick Answers, Documents, Meetings, Contact. The advisor can reorder sections and add a second Card Row. Card Rows lay out by card width (4 quarter, 2 half, 1 full, or mixed).
4. **Edit in place:** click a card in admin preview → editor drawer. No separate forms per card type.
5. **Guardrails, not freedom:** fixed type scale, fixed palette from branding, 3 bullets max, 1 image per card. Customizable enough, but it can't be made ugly.

Card style options

These sit alongside the existing typography options in **Settings › Branding**. They're set at the organization level, with an optional per-plan override and a live preview. They change only the look of components, never the layout or content.

Control	Options	Default
Corners	Square (2px) · Soft (10px) · Round (18px)	Square (matches today's templates)
Card surface	Outline (thin border) · Shadow (no border, soft lift) · Tinted (warm fill)	Outline
Buttons	Match corners · Pill	Match corners

What corners apply to: cards (1/4 and 2/4), Account Access, Glance cards, contact cards, inline answer panels, pills and chips, inputs, image corners inside cards, and video thumbnails. Navy emphasis cards keep their fill, so Surface affects white cards only.

Suggested presets (one click, then fine-tune):

1. **Classic:** Square + Outline + Match corners, serif headings. Today's look.
2. **Modern:** Soft + Shadow + Match corners, sans headings.
3. **Friendly:** Round + Tinted + Pill, serif or sans. The softest, most app-like look.

Implementation: stored as design tokens (`card_radius`, `card_surface`, `button_shape`, plus the existing type tokens) and rendered as CSS variables, so one setting restyles every hub without touching templates.

10. Baked-in topic templates

Today, deep topics like Rollovers and Financial Planning are **separate hand-built pages** (a hub page, then one page per option, each with its own hero, CTA band, and back button). This doesn't scale across plans or categories.

Image — Rollovers hub page: 4 option tiles linking to separate pages

Current: Rollovers hub → 4 option tiles, each opening its own page.

Image — Rollover to new employer plan: pros and cons page

Current: one standalone pros/cons page per option.

Image — Financial Planning signature process page

Current: Financial Planning as a standalone 3-phase process page.

The fix: templates rendered in Quick Answers

1. A **topic template** is a structured layout that ships with the topic, prefilled with compliance-reviewed copy. The advisor only fills slots (links, scheduler, contact) and toggles what shows.
2. Every rich topic renders in the **Quick Answers answer panel** (desktop) or the **full-screen answer view** (phone), not on a new page. It has its own URL (…/retirement#rollovers&option=ira) so marketing can deep-link.
3. Every rich answer has a **conversion CTA** in its footer bar (Section 11). No more “Back to Previous Page” or “Back to Home” buttons.

Template layouts (5 total)

Layout	Structure	Baked-in examples
Options Compare	2–6 options as tabs (desktop) / swipe chips (mobile); each option = quick answer + pros + cons	Rollovers (4 options), Roth vs. Pre-Tax, HSA vs. FSA, Basic vs. Voluntary Life, COBRA vs. Marketplace
Process Steps	Phases → steps, image per phase optional	Financial Planning (Exploration / Setting a Path / Staying the Course), Enrollment, Filing a Claim
Checklist	Ordered to-dos with links	Life Events, New Hire, Leaving the Company
Q&A	Quick answer + steps + blocks (Section 5)	Default for simple FAQs

Layout	Structure	Baked-in examples
Calculator / Link-out	Short intro + embedded or external tool	How much should I save?, How much life coverage?

Prefill vs. advisor slots

Prefilled (editable, with "Reset to default")	Advisor must fill or confirm
Titles, quick answers, pros/cons, steps, phase copy	Scheduler / appointment URL (from Settings)
Icons and default images	Provider login and rollover-form links
Related topic links	Advisor or specialist contact
Default CTA label	Which options or bullets to show or hide

A template topic with an empty required slot shows as **Needs setup** in the builder and routes the advisor to that exact field (per MVP rules). It stays hidden from participants until the slot is filled.

Card → Quick Answers: the “Rollovers” Featured card is a shortcut that scrolls to Quick Answers with Rollovers selected. The same content is never rendered in two places.

11. Conversion layer: FAQs that drive business

The purpose of the framework is to answer the participant's question and then connect them to a person. Every baked-in topic carries a **conversion CTA slot**, and the highest-intent topics ship as templates with that CTA turned on by default.

CTA types (one per topic, set on the placement)

1. **Schedule** → advisor or specialist scheduler URL from Settings
2. **Request a call** → the in-scope simple contact form, prefilled with plan + topic
3. **Talk to a specialist** → category contact card
4. **None** → informational only

Leads include the **source**: plan, location, topic, and option (e.g. Retirement › Rollovers › IRA). The advisor sees what the person was reading when they asked for help. This is also the future CRM push payload (Wealthbox phase).

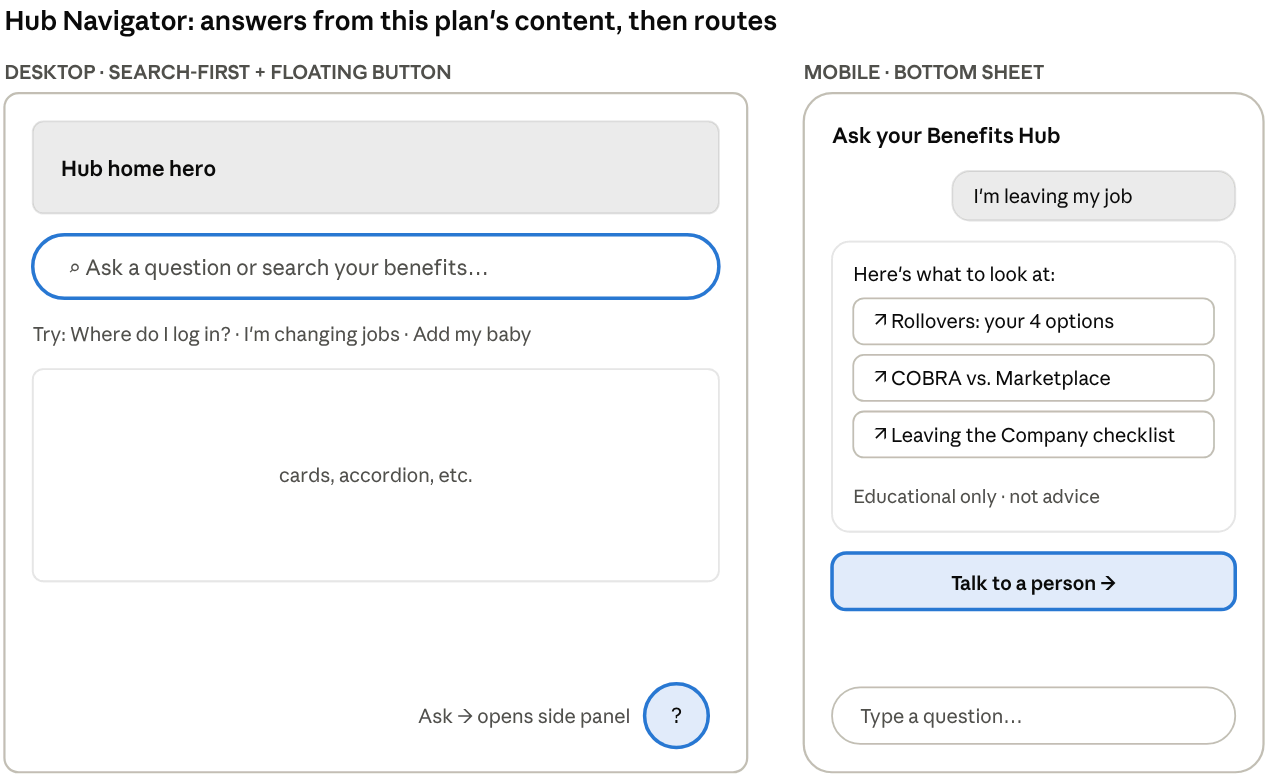

High-intent topics shipped with CTA on

Category	Topic (template)	Default CTA
Retirement	Rollovers & Distributions (Options Compare)	Talk through my options
Retirement	Financial Planning (Process Steps)	Schedule a planning call
Retirement	Review Investments Outside My Plan (Q&A)	Get a second opinion
Retirement	Approaching Retirement / Social Security (Checklist)	Build my retirement income plan
Retirement	College Savings (Options Compare: 529 vs. other)	Schedule
Group Health	Turning 65: Medicare vs. Staying on the Plan (Options Compare)	Talk to a Medicare specialist
Group Health	HSA as a Retirement Account (Q&A)	Schedule
Group Health	Leaving the Company: COBRA vs. Marketplace (Options Compare)	Request a call
Group Life	How Much Coverage Do I Need? (Calculator)	Review my coverage gap
Group Life	Leaving the Company: Portability vs. Conversion (Options Compare)	Request a call
Group Life	Disability Income Gap (Q&A)	Talk to a specialist
Custom	Financial Wellness / Coaching (Process Steps)	Book a session
Life Events	Leaving the Company, Approaching Retirement, Losing a Loved One	Schedule (on the checklist footer)

Guardrail: the CTA copy stays helpful, not salesy ("Talk through my options," not "Roll over with us"). Default copy gets a compliance review before launch, and the per-plan disclosure footer still applies.

12. Hub Navigator (chat)

Recommendation: yes, as a navigator, not an advisor. Its job is to route people to the right card, Quick Answer, Action Hub, document, or person. It answers only from **this plan's published content**. It does not generate advice.

Hub Navigator · desktop entry points + mobile sheet

Behavior

1. **Grounded only:** retrieves from this plan's topics, templates, documents, meetings, and contacts. If the answer isn't there, it says so and offers "Talk to a person."
2. **Answer = short reply + links:** 1–2 sentences plus up to 3 tappable links into the hub (Quick Answers, Action Hubs, checklists). Links matter more than prose.
3. **Account questions route to the Access card:** balances, claims, and ID cards go to the provider login. It never asks for SSN, DOB, or account numbers.

4. **Always offers a human:** "Talk to a person" opens the lead form with the chat topic as the source (Section 11).
5. **Entry points:** the "Ask a question" search bar on hub home (search and chat share one box), a floating "?" button on desktop, and the "Ask" tab in the mobile bottom nav.
6. **Suggested prompts** are generated from active Life Events and Featured topics.

Sequencing

Ship **TF-7 search first** (same box, keyword results). Turn on the Navigator after default topic content is written, because a grounded bot is only as good as the content. Compliance flag: for LPL-affiliated advisors, chat transcripts may count as communications requiring supervision or retention. Confirm with compliance before launch (open question).

13. Mobile + desktop rules

Many participants are on phones (hourly, field, and hospitality staff like Ayres). Others are at desks and workstations. Both need to feel premium. Same components, two layouts.

Element	Desktop / workstation	Mobile
Nav	Top nav: Your Benefits ▾ · Life Events · Employee Resources · Ask	Sticky bottom nav: Home · Benefits · Life Events · Ask
Card rows	4 quarter / 2 half / 1 full, max content width 1200px	Always 1-column stack; Access cards first by default on mobile (advisor can turn off)
Quick Answers	Two-pane: grouped question list + answer panel	Vertical list; the answer opens full-screen with a back arrow
Options Compare	Tabs across the top, pros and cons side by side	Swipe chips; pros and cons as collapsible sections, Pros open
Answers shown	One at a time, in the answer panel	One at a time, full-screen; back returns to the list
Sticky CTA	In the answer panel footer	Full-width button at the bottom of the thumb zone

Element	Desktop / workstation	Mobile
Navigator	Search bar on home + floating ? button → side panel	Ask tab → bottom sheet

Quality bar

1. Tap targets at least 44px; body text at least 16px on mobile.
2. Images from the default library are served responsive (hero at a mobile crop), lazy-loaded below the fold.
3. Hub home loads usable in under 2.5s on 4G (LCP).
4. Keyboard and screen reader support for tabs, the Quick Answers list, and modals (arrow keys move between questions; focus trap in modals, Esc closes).
5. Test widths: 375, 768, 1280, 1920.

14. Data model

Suggested shapes. Eddie should adapt the names to the existing schema.

```
Topic
  id, scope: system | org, org_id (null for system)
  title, summary, icon, image_id
  body_blocks: [ {type: quick_answer|steps|documents|video|contact|cta, ...}
]
  tags: []
  default_locations: []          // where it shows in the library by default
  is_action_hub: bool
  default_cta: {label, action_type, destination}
  status: active | archived

TopicPlacement                    // plan-scoped
  id, plan_id, topic_id
  location: retirement|group_health|group_life|custom|employee_resources
  display_mode: featured | accordion | hidden   // accordion = listed in
Quick Answers
  group_id (accordion only), sort_order
  overrides: {title?, summary?, body_blocks?, cta?}
  action_hub_link: {label?, url?}  // this location's row in the Action Hub
panel
```

```
AccordionGroup                    // plan-scoped
  id, plan_id, location, name, sort_order

LifeEvent                         // plan-scoped, seeded from system
templates
  id, plan_id, key (having_a_baby, moving, ...), title, deadline_days?,
active
  steps: [ {placement_id, sort_order, label_override?} ]

CTA action_type: external_url | topic_modal | document | contact |
action_hub_panel

FeaturedRow                       // plan-scoped, "How Can We Help" grid
  id, plan_id, location, row_index (1-3)
  layout: 4x1 | 2-1-1 | 1-1-2 | 2-2
  slots: [ {placement_id | access_card_id | contact_id, span: 1|2} ]
```

Rules

1. Effective topic = Topic merged with placement overrides. Render from the merged view.
2. Seeding: when a benefit category is created, create placements for that category's default topics (Featured and Quick Answers per the library defaults). Same for Employee Resources and Life Events when enabled.
3. Deleting a category hides its placements; it does not delete topics.
4. Documents, videos, and contacts referenced in blocks resolve at render time by plan + category, so they never bleed across plans.
5. Archiving a system topic never removes it from a live hub without advisor action. Flag it in admin instead.

15. Default topic library (v1)

Titles only. Copy is written separately and reviewed for compliance before launch. ↔ marks an Action Hub.

Retirement

Featured (default)	Quick Answers (default)
Financial Planning	**Contributions & Saving:** How much should I be saving? · Change my contribution rate · Roth vs. Pre-Tax · Catch-up contributions · Employer match
Rollovers & Distributions	**Investing:** Understanding investment options · Target date funds · Review investments outside the plan
Update My Beneficiaries ↔	**Taking Money Out:** 401(k) loans · Hardship withdrawals · Required minimum distributions · Previous employer plans
Plan Materials	**Planning Ahead:** Understanding vesting · Social Security · College savings · What happens if I leave?

Group Health

Featured (default)	Quick Answers (default)
Access My Health Account	**Understanding Coverage:** Deductibles, copays & coinsurance · Prescription coverage · Preventive care · Dental & vision
Find Care & Providers	**Using Your Plan:** Telehealth · ID cards · Claims & billing · Urgent care vs. ER
Understand My Coverage	**Changes:** Add or remove a dependent ↔ · Qualifying life events · Open enrollment
HSA / FSA Resources	**Accounts:** HSA vs. FSA · Eligible expenses · Contribution limits

Group Life

Featured (default)	Quick Answers (default)
Review My Coverage	**Coverage Types:** Basic vs. voluntary life · Spouse & dependent coverage · AD&D · Disability coverage
Update My Beneficiaries ↔	**Enrollment:** Evidence of insurability · How much coverage do I need?
File a Claim / Get Support	**Leaving or Retiring:** Portability · Conversion
Understand My Options	**Beneficiaries:** Beneficiary questions · Naming a minor or trust

Other / Custom

No fixed defaults. When the advisor names the category, suggest a starter set by keyword match (Wellness, EAP, Voluntary Benefits, Financial Wellness). The advisor can start blank.

Employee Resources

See the table in Section 7b.

Life Events

Having a baby · Getting married · Moving · Leaving the company · Approaching retirement · Losing a loved one · Divorce · Going on leave

16. Default content library (full builds)

This is the prefilled copy that ships with each baked-in template. Advisors only fill the **[slots]** and toggle what shows. All copy is **draft for compliance review** before launch.

Content rules

1. **Educational, not advice.** Explain options and trade-offs; never recommend a specific action. Every rich answer's footer shows: "Educational only. Not tax, legal, or investment advice."

2. **No hard-coded dollar figures.** Limits and thresholds that change yearly use **annual figure tokens** (e.g. `{{401k_deferral_limit}}`, `{{catch_up_limit}}`, `{{hsa_limit_family}}`, `{{ss_earnings_test}}`). One admin table updates every hub each January.
3. **Rules that change by law** (RMD ages, catch-up rules, Medicare timelines) are tagged `review_yearly` and flagged in admin for an annual check.
4. **Plan-specific facts are slots, not assumptions:** whether the plan allows loans, hardship withdrawals, Roth, in-plan rollovers, or partial distributions. A slot left unset hides the line.
5. **Every template ends in a human:** one conversion CTA (Section 11) plus related topics.

Token + slot legend

Type	Example	Filled by
Annual figure token	`{{catch_up_limit}}`	PlanTelligence admin, once a year
Plan slot	[Plan allows loans: yes/no]	Advisor, per plan (defaults from Create Benefits where possible)
Link slot	[Rollover form URL]	Advisor, per plan
Contact slot	[Scheduler URL]	Settings (advisor profile)

16.1 Rollovers & Distributions · Options Compare · Retirement

Card: *Changing jobs? You have 4 options.* — See what you can do with your old retirement account, side by side. → **Explore my options**

Answer intro: When you leave a job, you decide what happens to the money in that employer's retirement plan. The choice affects taxes, fees, investment options, and how easy your savings are to manage. There's no single right answer. It depends on your situation.

Option 1 · Roll over to your new employer's plan Quick answer: Move your old balance into your new employer's plan, if it accepts rollovers.

Pros	Cons
One account to track and manage	Limited to the new plan's investment menu
Keeps plan-level protections from creditors	New plan fees may be higher or lower
May allow loans from the combined balance	Must wait until you're eligible in the new plan
Money stays tax-deferred	Plan rules control withdrawals and timing
May let you delay RMDs while still working there	Fewer beneficiary options than some IRAs

Option 2 · Roll over to an IRA Quick answer: Move your balance into an Individual Retirement Account you control.

Pros	Cons
Widest range of investment choices	Fees depend on the provider and investments
Can consolidate several old plans in one place	No loans from an IRA
Flexible withdrawal and beneficiary options	Rule of 55 penalty exception doesn't apply
Roth 401(k) money can go to a Roth IRA	Creditor protection can depend on state law

Option 3 · Leave it in your old employer's plan Quick answer: If your balance is large enough, you can usually leave it where it is.

Pros	Cons
No action needed right now	Easy to lose track of; update your address
Keeps plan protections and institutional pricing	Can't add new contributions
Rule of 55: penalty-free withdrawals if you left in or after the year you turn 55	Small balances (up to `{{force_out_limit}}`) may be cashed out or moved by the plan

Pros	Cons
Stable value or unique funds may stay available	Plan changes are outside your control

Option 4 · Cash out Quick answer: Take the money as cash. It's usually the most expensive option.

Pros	Cons
Immediate access to funds	Taxed as ordinary income in the year you take it
Can cover an emergency or pay off high-interest debt	Usually a 10% additional tax if under 59½ (exceptions apply)
	Plans must withhold 20% for federal tax up front
	You lose future tax-deferred growth
	May raise your tax bracket and affect other benefits

Before you decide (checklist block):

1. Ask for a **direct rollover** (plan to plan or plan to IRA). A check made out to you triggers 20% withholding, and you have 60 days to redeposit the full amount.
2. Have an **outstanding 401(k) loan**? It may become due when you leave. An unpaid balance can be treated as a distribution.
3. Own **company stock** in the plan? Ask about special tax treatment (NUA) before rolling it over.
4. Keep Roth and pre-tax money separate so each goes to the right account type.
5. Update your beneficiaries on the new account.

Advisor slots: [Plan allows partial distributions], [Recordkeeper rollover/distribution form URL], [Recordkeeper phone], [Scheduler URL]

Related: Leaving the Company checklist · Required Minimum Distributions · Update My Beneficiaries · Review Investments Outside My Plan

CTA: *Talk through my options* (Schedule)

16.2 Financial Planning · Process Steps · Retirement (also placeable in Custom / Financial Wellness)

Card: *Financial Planning* — A step-by-step planning process built around your goals, [included with your plan / available to you]. → **See how it works**

Answer intro: Your retirement plan is one piece of your financial life. Planning connects it to everything else: your goals, your family, your debts, your other savings, and your timeline.

Phase	Step	Default copy
1 · Exploration	Listen to you	We start by learning about you: your goals, values, and what you want your money to do for you.
	Confirm your financials	Together we build a clear picture of where you are today: income, savings, debts, benefits, and accounts.
2 · Setting a path	Develop your plan	We build a plan around your goals and your current picture, with clear next steps.
	Educate you on your plan	We walk through the strategy, the trade-offs, and any gaps so you understand the why, not just the what.
3 · Staying the course	Implement your plan	We help you take the first steps and put the plan into action.
	Monitor and adjust	Life changes, and your plan should too. We meet regularly to review progress and adjust.

“What we can help with” block (toggle each): Saving for retirement · Retirement income planning · Social Security timing · Medicare decisions · Rollovers and consolidating old accounts · Investments outside your plan · College savings · Budgeting and debt · Insurance and protection · Estate and beneficiary basics

“What to bring to your first meeting” checklist: recent pay stub · retirement and investment statements · benefits summary · list of debts · your top 3 goals

FAQ strip (3 short Q&As):

1. *Does this cost anything?* → [Advisor slot: fee disclosure or “included with your plan”]
2. *Do I need a lot of money to get started?* → No. Planning is useful at every stage, especially early.
3. *Is this in person?* → [Advisor slot: virtual / in person / both]

Advisor slots: [Firm name], [Cost / fee disclosure], [Meeting format], [Scheduler URL], [Advisor photo + bio link]. Phase images from the default image library.

16.3 Social Security · Options Compare + Q&A · Retirement · `review_yearly`

Card: *When should I claim Social Security?* — Your claiming age can change your benefit for life. See how it works. → **Compare claiming ages**

Answer intro: Social Security will likely be one of your largest sources of retirement income. You can start benefits as early as 62 or as late as 70, and the age you choose permanently affects your monthly amount.

Options Compare · claiming age

	Claim early (62)	Claim at full retirement age (FRA)	Delay to 70
Monthly benefit	Permanently reduced (up to about 30% less if your FRA is 67)	Your full benefit	About 8% more for each year you wait past FRA
Good fit when…	You need income now, or have health or longevity concerns	You want your full benefit and are ready to stop working	You're healthy, have other income, or want a larger survivor benefit for a spouse
Watch out for	Earnings limit if you keep working (`{{ss_earnings_test}}`)	FRA is 67 if born 1960 or later	No extra credit for waiting past 70

Related Quick Answers (defaults):

1. **What is my full retirement age?** 66 to 67 depending on birth year; 67 if born in 1960 or later.
2. **Can I work and collect?** Yes. Before FRA, benefits may be temporarily withheld if earnings exceed `{{ss_earnings_test}}`. Withheld amounts are credited back after FRA.
3. **What about my spouse?** A spouse may receive up to 50% of your FRA benefit. Survivors may receive up to 100% of what you were receiving. Your claiming age affects both.
4. **Are benefits taxed?** Up to 85% of benefits can be taxable depending on your total income.
5. **How do I see my estimate?** Create a *my Social Security* account at ssa.gov to view your earnings record and estimates by age.
6. **How does this fit with my 401(k)?** Some people use savings to bridge the years before claiming. This is a planning decision worth discussing.

Steps block: 1. Create your *my Social Security* account · 2. Check your earnings record for errors · 3. Review your estimates at 62, FRA, and 70 · 4. Talk through timing alongside your other income

Advisor slots: [Scheduler URL]. Fixed external link: ssa.gov/myaccount.

16.4 Turning 65: Medicare · Options Compare + Q&A · Group Health (also Retirement) · `review_yearly`

Card: *Turning 65? Medicare and your health plan* — Know your deadlines and whether to enroll now or stay on your employer plan. → **See my options**

Answer intro: At 65 you become eligible for Medicare. If you're still working, you may be able to stay on your employer's health plan, but the rules depend on your employer's size and your situation. Missing a deadline can mean lifelong penalties, so it pays to plan a few months ahead.

Deadline banner: Your Initial Enrollment Period is 7 months: the 3 months before the month you turn 65, that month, and the 3 months after.

Options Compare · at 65 while still working

	Stay on employer plan, delay Part B	Enroll in Medicare (A + B)
Often fits when…	Employer has 20+ employees and you're covered through your (or your spouse's) current job	Employer has fewer than 20 employees, or Medicare costs less for your needs
Key facts	Many people take premium-free Part A and delay B. You get an 8-month Special Enrollment Period after the job or coverage ends.	Medicare may become your primary coverage. You may keep the employer plan as secondary.
Watch out for	COBRA and retiree coverage don't count as current-employment coverage for delaying Part B	Part B premium, plus higher premiums (IRMAA) at higher incomes
HSA note	Enrolling in any part of Medicare ends HSA contributions. Part A can backdate up to 6 months, so stop contributions ahead of time.	Same

Related Quick Answers (defaults):

1. **What are Parts A, B, C, and D?** A = hospital. B = doctors and outpatient. D = prescriptions. C (Medicare Advantage) = private plans that bundle A, B, and usually D.
2. **Medigap vs. Medicare Advantage?** Medigap supplements Original Medicare. Advantage replaces it with a private plan. The best time to buy Medigap is the 6 months after you're 65 and enrolled in Part B.
3. **What are the late penalties?** Part B: 10% for each full 12 months you could have had it but didn't, for life. Part D: 1% per month without creditable drug coverage, for life.
4. **Is my employer drug coverage creditable?** Your plan sends a notice each year. Keep it. [HR slot: link to creditable coverage notice]
5. **I'm retiring. What's my deadline?** Enroll in Part B within 8 months of your job or coverage ending, whichever comes first. Don't rely on COBRA to delay.
6. **Does my spouse need to act?** If your spouse is on your employer plan and you retire, they may need their own coverage plan. Check their dates too.

Steps block: 1. Mark your 7-month window · 2. Ask HR whether the plan is primary or secondary at 65 · 3. Decide on Part B · 4. Pause HSA contributions if enrolling · 5. Compare Medigap / Advantage / Part D before coverage starts

Advisor slots: [Medicare specialist contact], [Employer size: 20+ yes/no, from HR], [Creditable coverage notice link]. Fixed external links: medicare.gov, ssa.gov.

4. Change your name, if applicable (↔)
5. Update tax withholding (Employee Resources)
6. Rebuild your financial plan (Financial Planning)

Going on leave · *Request leave [30] days ahead when possible* · CTA: *Talk to my benefits team*

1. Understand your leave options (FMLA, parental, medical) (Employee Resources)
2. File a short-term disability claim, if applicable (Group Life · Disability)
3. Keep your benefits active: how premiums are paid while on leave (Group Health)
4. 401(k) contributions and loan payments while on leave (Retirement)
5. Plan your return to work (Employee Resources)

16.6 Other directed topics · quick-answer defaults

Every topic below ships with a prefilled Quick Answer. ★ **= directed topic:** conversion CTA on by default, and the topic is a candidate for a full template build next. Others are informational, with CTA off by default.

Retirement

Topic	Template	Quick answer (default)	CTA
★ Approaching Retirement: Income Plan	Checklist	Turning savings into a paycheck takes a plan: when to retire, when to claim Social Security, and how to draw from your accounts.	Build my income plan
★ Review Investments Outside My Plan	Q&A	Old 401(k)s, IRAs, and brokerage accounts all count. Seeing everything together helps you spot overlap, gaps, and fees.	Get a second opinion

Topic	Template	Quick answer (default)	CTA
★ How Much Should I Be Saving?	Calculator	A common starting point is enough to get the full employer match, then increasing over time toward your retirement goal.	Check my savings rate
★ College Savings (529 and other options)	Options Compare	529 plans offer tax-advantaged growth for education. Other options have different trade-offs.	Schedule
★ Inherited Retirement Accounts	Q&A	Rules depend on your relationship to the person. Most non-spouse beneficiaries must empty the account within 10 years.	Talk to an advisor
Roth vs. Pre-Tax Contributions	Options Compare	Pre-tax lowers your taxes now. Roth means paying taxes now for tax-free qualified withdrawals later.	Optional
Catch-Up Contributions	Q&A	At 50+, you can contribute an extra `{{catch_up_limit}}`. Ages 60–63 may qualify for a higher catch-up of `{{catch_up_60_63}}` [if the plan allows].	Off
Employer Match	Q&A	[Plan slot: match formula]. Not contributing enough to get the full match leaves money on the table.	Off
Understanding Vesting	Q&A	Your own contributions are always yours. Employer contributions may vest over time: [plan slot: vesting schedule].	Off

Topic	Template	Quick answer (default)	CTA
401(k) Loans	Q&A	[Plan slot: loans allowed]. You borrow from your own balance and repay through payroll with interest.	Request a loan (link)
Hardship Withdrawals	Q&A	[Plan slot]. For immediate, heavy financial need. Taxes and possibly a 10% additional tax apply.	Off
Required Minimum Distributions	Q&A · `review_yearly`	Withdrawals from pre-tax accounts must generally begin at 73 (75 if born 1960 or later). Roth 401(k)s no longer require RMDs.	Talk to an advisor
Investment Options & Target-Date Funds	Q&A	[Plan slot: fund lineup link]. Target-date funds adjust automatically as you approach retirement.	Off

Group Health

Topic	Template	Quick answer (default)	CTA
★ Turning 65: Medicare	Options Compare	See 16.4.	Talk to a Medicare specialist
★ HSA as a Retirement Account	Q&A	An HSA can be invested and carried into retirement. After 65, non-medical withdrawals are taxed like a 401(k) with no penalty.	Schedule
★ Leaving the Company: COBRA vs. Marketplace	Options Compare	COBRA keeps your exact plan (usually up to 18 months, full cost). Losing coverage also opens a 60-day Marketplace window, where subsidies may apply.	Request a call

Topic	Template	Quick answer (default)	CTA
HSA vs. FSA	Options Compare	HSA: needs a high-deductible plan, rolls over, is yours to keep. FSA: any plan, use-it-or-lose-it [plan slot: carryover / grace period].	Off
Deductibles, Copays & Coinsurance	Q&A	Deductible: what you pay before the plan pays. Copay: flat fee. Coinsurance: your % after the deductible. Out-of-pocket max caps your yearly spend.	Off
Adding or Removing a Dependent ↔	Action Hub	You usually have [30] days after a qualifying event. Update each plan.	Talk to HR
Qualifying Life Events	Q&A	Marriage, birth or adoption, divorce, loss of other coverage, and moving can let you change benefits outside open enrollment.	Off
Preventive Care	Q&A	Many preventive services are covered at no cost in-network.	Off
Telehealth & Urgent Care vs. ER	Q&A	Use telehealth for minor issues, urgent care for same-day needs, and the ER for emergencies. Costs differ a lot.	Off
Prescription Coverage	Q&A	[Plan slot: formulary link]. Generics and mail order can lower costs.	Off

Group Life & Disability

Topic	Template	Quick answer (default)	CTA
★ How Much Life Insurance Do I Need?	Calculator	Group coverage is often 1–2× salary. Many families need more to cover income, debts, and future goals.	Review my coverage gap
★ Leaving the Company: Portability vs. Conversion	Options Compare	Portability keeps term coverage at group rates. Conversion switches to an individual policy without a health exam. Both usually require action within [31] days.	Request a call
★ Disability Income Gap	Q&A	Disability coverage replaces part of your pay, often 60%, and benefits may be taxable. The gap can matter more than people expect.	Talk to a specialist
Basic vs. Voluntary Life	Options Compare	Basic is employer-paid. Voluntary is extra coverage you buy through payroll, often at group rates.	Off
Evidence of Insurability (EOI)	Q&A	Coverage above the guaranteed amount, or elected late, may require health questions.	Off
AD&D	Q&A	Pays for accidental death or specific injuries. It's added to life insurance, not a replacement for it.	Off
File a Claim	Q&A	[Carrier claim link and phone]. HR can help with the forms.	Contact HR

Other / Custom (starter sets by keyword) · **Financial Wellness:** ★ Budgeting & Emergency Savings · ★ Paying Down Debt · ★ Estate Basics: Wills, Trusts, Beneficiaries · Credit Scores. **Wellness:** EAP (confidential counseling) · Mental Health Resources · Fitness Benefits. **Voluntary Benefits:** ★ Long-Term Care · Critical Illness & Accident · Pet Insurance · Legal Plans.

Employee Resources: defaults as in Section 7b, all informational (CTA → HR contact).

Build next (full templates): Approaching Retirement Income Plan, COBRA vs. Marketplace, Portability vs. Conversion, How Much Life Insurance, and Inherited Accounts. These are the highest-intent after Rollovers, Financial Planning, Social Security, and Medicare.

17. Tickets

Build in this order. Each ticket has two parts: **(A) UI / admin flow** and **(B) underlying logic**.

TF-1 · Topic + Placement foundation · Must Have

A. None (backend only). **B.** Topic, TopicPlacement, and AccordionGroup models; merged "effective topic" resolver; seeding on category create; plan-scoped queries. **Accept:** Plan A and Plan B each seeded with Retirement; editing a placement in Plan A doesn't change Plan B.

TF-2 · Participant category page template · Must Have

A. Hero, Account Access, Featured cards, Quick Answers (grouped list + answer panel with content blocks), Documents, Contact (Sections 4–5). **B.** Render from placements; skip empty sections; per-answer URLs; card CTA action types. **Accept:** Retirement page matches the wireframe for the Air Fayre demo data; hidden topics don't render; mobile layout works.

TF-3 · Admin topic builder · Must Have

A. Topics tab per location with three zones, drag reorder, row dropdown, editor drawer, library drawer (Section 8). **B.** Persist display mode, order, and group; overrides vs. org-level edit scope; Featured cap warning. **Accept:** Promote "Roth vs. Pre-Tax" to Featured and demote "Rollovers" to Quick Answers with no rebuild; changes persist after refresh and logout/login.

TF-4 · Default library + all four categories · Must Have

A. Library seeded with Section 15 titles; Custom starter-set suggestion. **B.** Seed data; system vs. org scope. **Accept:** A new plan with Retirement + Group Health + Group Life shows the default Featured and Quick Answers topics on each page in canonical order.

TF-5 · Action Hubs · Medium (Must Have if HR is part of pilot sales)

A. ↔ badge, per-location sub-link fields, participant panel (Section 6). **B.** Sub-link priority (placement URL → provider URL → contact); row visibility; single-row shortcut. **Accept:** Beneficiaries panel shows Retirement + Life rows; hiding Group Life removes that row; with one row, the CTA links directly.

TF-6 · Employee Resources hub · Medium (Must Have if HR is part of pilot sales)

A. Fifth location using the same template and builder; nav placement after categories. **B.** Location enable toggle per plan; doesn't count toward the 1–4 limit; collaborator edit scope for this location. **Accept:** Enabling it doesn't change category counts or completion; an HR collaborator can edit only this location.

TF-7 · Hub search · Medium

A. Search bar on each location page. **B.** Match title, quick answer, and tags within the location. **Accept:** Typing "loan" returns the 401(k) loan topic.

TF-8 · Life Events · Low (validate with pilot advisors first)

A. Picker, guided checklist page, deadline banner, admin step editor (Section 7a). **B.** LifeEvent model seeded from templates; steps reference placements; hidden-category steps drop out. **Accept:** "Having a baby" shows 6 steps; hiding Group Life removes step 3.

TF-9 · Card module + page sections · Must Have

A. One Card editor with presets (Access, Access multi-provider, Topic, Contact); widths; drag cards and sections anywhere (Section 9). **B.** Card + PageSection models; Access prefill from Create Benefits providers; multi-provider rows auto-sync. **Accept:** Move the Retirement Access card below the Featured row; add a "Looking for your insurance account?" card on hub home listing all carriers; a hidden carrier's category drops its row.

TF-10 · Topic templates + Quick Answers · Must Have

A. Quick Answers UI (desktop two-pane question list + answer panel; phone vertical list + full-screen answer); 5 layouts; prefilled copy with Reset to default; Needs setup state (Section 10). **B.** Template schema per layout; deep-link URLs with option param; required-slot validation hides unconfigured topics. **Accept:** Rollovers and Financial Planning rebuilt as templates, replacing the standalone Ayres pages; a deep link to ?option=ira opens the IRA tab; works at 375px and 1920px.

TF-11 · Conversion CTAs + lead source · Must Have

A. CTA type picker on each placement; CTA footer in rich answers (Section 11). **B.** Contact form prefilled and tagged with plan / location / topic / option; routed to the advisor. **Accept:** Submitting from Rollovers › IRA delivers a lead showing that exact source; plan-scoped with no cross-plan leads.

TF-12 · Hub Navigator · Low (after TF-7 and default content)

A. Shared search/ask box, floating button, mobile Ask tab, answer + links + Talk to a person (Section 12). **B.** Retrieval over the plan's published content only; account-question routing; no PII capture; transcript retention per compliance decision. **Accept:** "I'm leaving my job" returns Rollovers, COBRA, and the Leaving the Company checklist for that plan only.

TF-13 · Default content seeding + annual figures · Must Have

A. Admin table for annual figure tokens; `review_yearly` flag list; slot-completion prompts per plan (Section 16). **B.** Seed all Section 16 content; token renderer; hide lines whose plan slot is unset; year-stamp on figures. **Accept:** Updating `{{catch_up_limit}}` once changes every hub; a plan with loans set to No hides the loan line and the loan topic.

Open questions for Ty & Dan

1. Is the HR / Employee Resources angle part of the pilot pitch? This decides whether TF-5 and TF-6 are Must Have.
2. Who writes and approves default topic copy, and does it need a compliance review step?
3. Should the Air Fayre / Waypoint demo be the first plan migrated onto the framework? Should the Ayres Rollovers and Financial Planning pages be the first templates? Do Navigator transcripts need supervision or retention for LPL-affiliated advisors?
